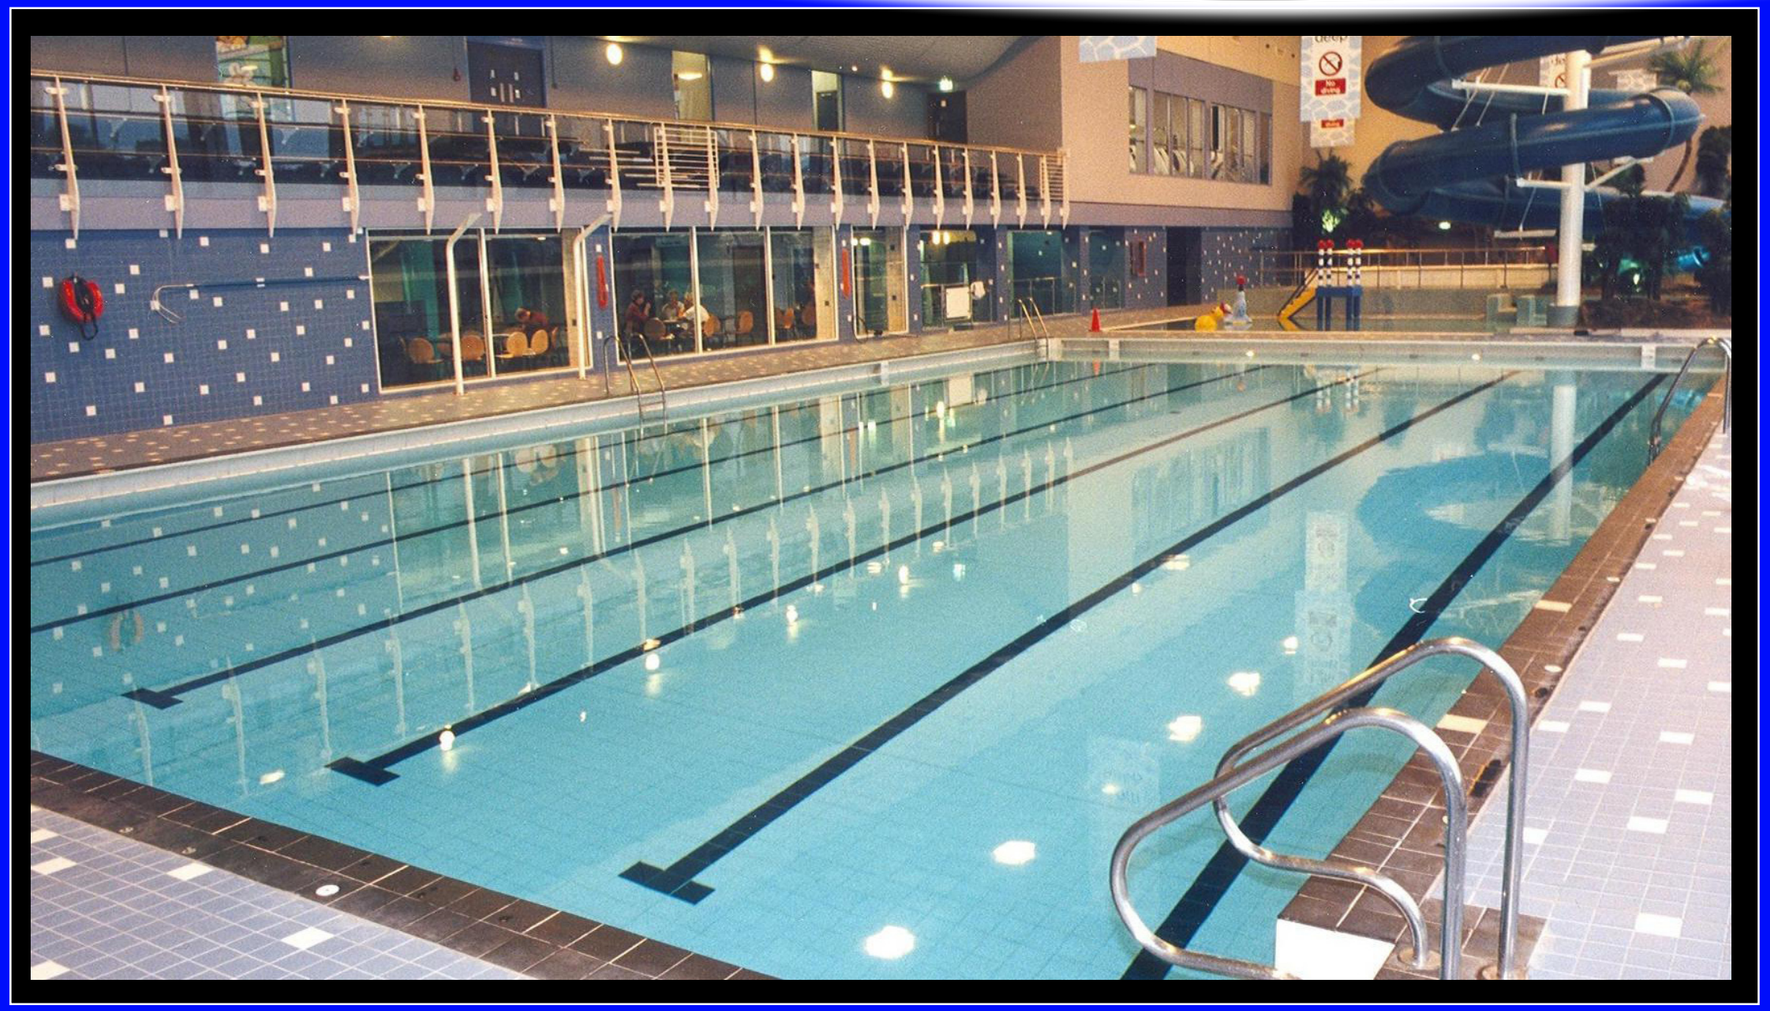
Diarrhea in the Pool

Someone just had a diarrheal accident in this pool.
You can't see it so it's not a problem, right?
The chlorine will quickly kill the germs, right?

NOT EXACTLY!!!



The Truth!

1-Swimming with diarrhea puts others at risk for getting sick.

2-Just one diarrheal accident can contaminate an entire pool.

3-Chlorine doesn't kill germs right away. Germs such as crypto can live for days in a pool.

4-Don't swim if you have diarrhea. If a diarrheal accident occurs in the pool, report it immediately.

5-For more information on recreational water illnesses such as crypto, contact the Local Health Department in your area or call 801-538-6191.
