Bureau of Emergency Medical Services & Preparedness and Office of Health Care Statistics (2012). Utah Emergency Department Utilization and Charges Profile Statewide Summary (2009 Utah Emergency Department Encounter Data, Emergency Department Annual Report EDAR-2009). Salt Lake City, Utah: Utah Department of Health.

Acknowledgments

This report was developed under the joint direction of the Bureau of Emergency Medical Services and Preparedness and the Office of Health Care Statistics, Utah Department of Health. The mission of the Bureau of Emergency Medical Services and Preparedness is to promote a statewide system of emergency and trauma care to reduce morbidity and mortality through prevention, awareness and quality intervention.

Numerous individuals contributed to the report. The participation of Utah hospitals and their staffs in providing emergency department encounter data is gratefully acknowledged.

Section I—Introduction

The Hospital Emergency Department Annual Report 2009 (EDAR-2009) contains information about patient encounters with Utah hospital emergency departments. This Report is released by the Bureau of Emergency Medical Services and Preparedness (BEMSP) and the Office of Health Care Statistics (OHCS), Utah Department of Health (UDOH).

Background

Encounters by patients with hospital emergency departments (EDs) are a significant segment in the continuum of emergency medical care. ED encounter data provide a measure of outcomes of pre-hospital emergency services as well as a starting point for evaluating in-hospital trauma care and subsequent rehabilitation services. Consumers, employers, payers, policymakers, and providers can use encounter data to better understand the health care needs of Utah citizens, patterns of ED utilization, and the burden of injury and illness throughout the state.

The Utah Hospital Emergency Department 2009 Annual Report is a statewide ED utilization report prepared by the Utah Department of Health. This report contains data about all ED encounters. The accompanying tables contain ED encounter data as well as outpatient ED visits (i.e., patient encounters that did not result in a hospital admission) and data that describe inpatient admissions (i.e., those leading to a hospital admission). Utah participates in the national Healthcare Cost and Utilization Project (HCUP), which maintains health care databases including ED encounter data.

The 2009 Utah database consists of 770,211 records of ED encounters at 43 acute care hospitals in Utah. The data were compiled, edited, and analyzed according to the methodology described in appendices to this report.

Organization and Scope of the Report

The Report is organized into seven sections.

Section I - Introduction: includes a brief background of the ED annual report series.

Section II - Summary of Findings: consists of summary highlights and charts describing the following data source: ED encounter data, which include the combined data on all ED visits

Section III - Data: presents information about data collection, submission, and editing routines, and a discussion of privacy, confidentiality, and access to data.

Section IV - Technical Notes and Limitations: presents information useful for interpreting the data, limitations of the data, and references.

Section V - Appendices: contains table descriptions, electronic resource documents, and characteristics of reporting hospitals.

Section I—Introduction

Section VI - Tables: contains tabulated descriptions of ED encounters, ED outpatient visits, and ED inpatient admissions.

Section II—Summary of Findings

ED Encounters

During 2009, there were 770,211 encounters with Utah hospital EDs for a rate of 27.5 encounters per 100 persons in the state. The number of Utah hospital ED encounters has increased steadily over the last ten years.

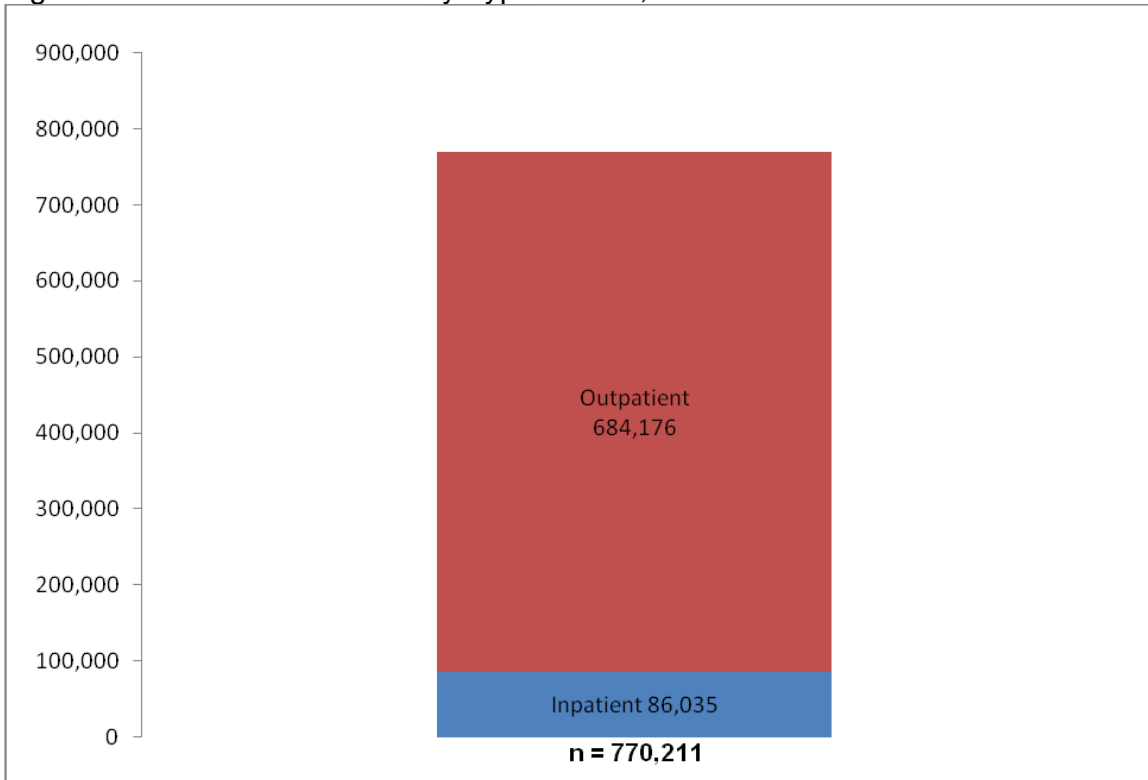

Figure 1. Total ED Encounters in Utah: 2000-2009

Total charges for the 770,211 visits in 2009 were \$2,999,970,489 (see Table 1). Of the total encounters, 684,176 (89%) required no subsequent admission to the hospital, while 86,035 (11%) did require a subsequent admission. Total charge for the outpatient visits was \$1,078,133,031 and for the inpatient admissions was \$1,915,837,459.

Section II—Summary of Findings—ED Encounters

Figure 2. Total ED Encounters by Type in Utah, 2009

Geographic Region

There were 579,950 visits (75% of total) to urban hospitals and 190,261 (25%) to rural hospitals. However, there was a greater difference in charges, with urban hospital charges totaling \$2,567,859,799 (84%) and rural hospital charges totaling \$426,110,690 (16%). Figure 3 illustrates these data.

Section II—Summary of Findings—ED Encounters

Figure 3. Percent Distribution of ED Encounters by Region and Charges: Utah, 2009

Patient Characteristics

As in prior years, more women (55%) than men (45%) had ED encounters during 2009 (Figure 4). The distribution of ED encounters by age group is shown in Figure 4. People aged 1 to 4 years, 20 to 24 years, and 25 to 29 years had higher numbers of encounters than those in other age groups. Please see Table 2 for more information.

Section II—Summary of Findings—ED Encounters

Figure 4. Percent Distribution of ED Encounters by Gender: Utah, 2009

Section II—Summary of Findings—ED Encounters

Figure 5. Distribution of ED Encounters by Patient's Age Group: Utah, 2009

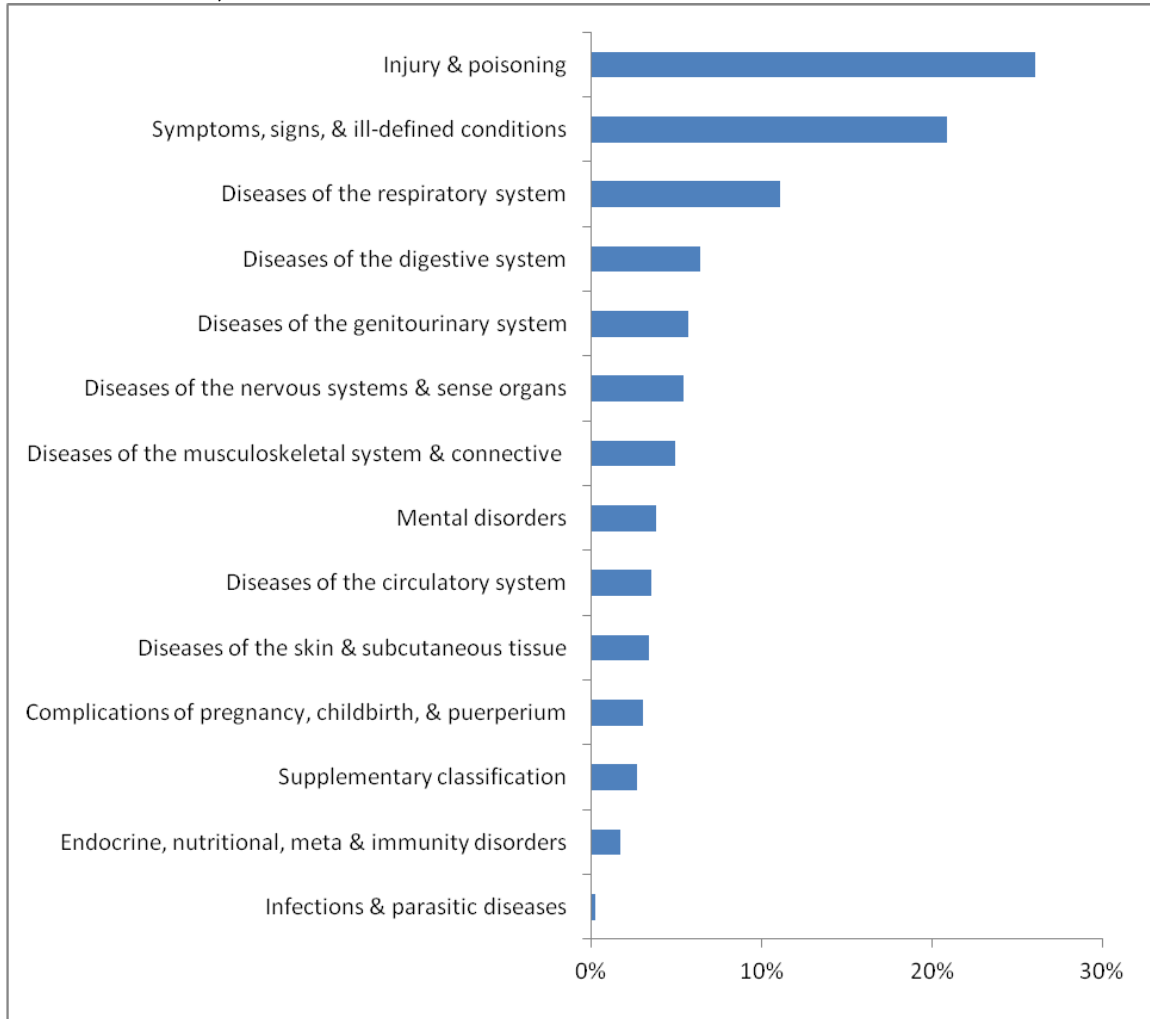

Encounter Characteristics

Major disease category. Injury and poisoning represented the most frequent disease category (196,138 or 22%) of all ED encounters in 2009 and resulted in total charges of \$660,255,755. Encounters due to symptoms, signs, and ill-defined conditions (21%) and diseases of the respiratory system (11%) were the second and third most frequent causes, respectively. Statewide average charges per encounter were highest for neoplasms (\$21,402) and diseases of the circulatory system (\$14,921). Please see Figure 6 and Table 3 for additional information.

Section II—Summary of Findings—ED Encounters

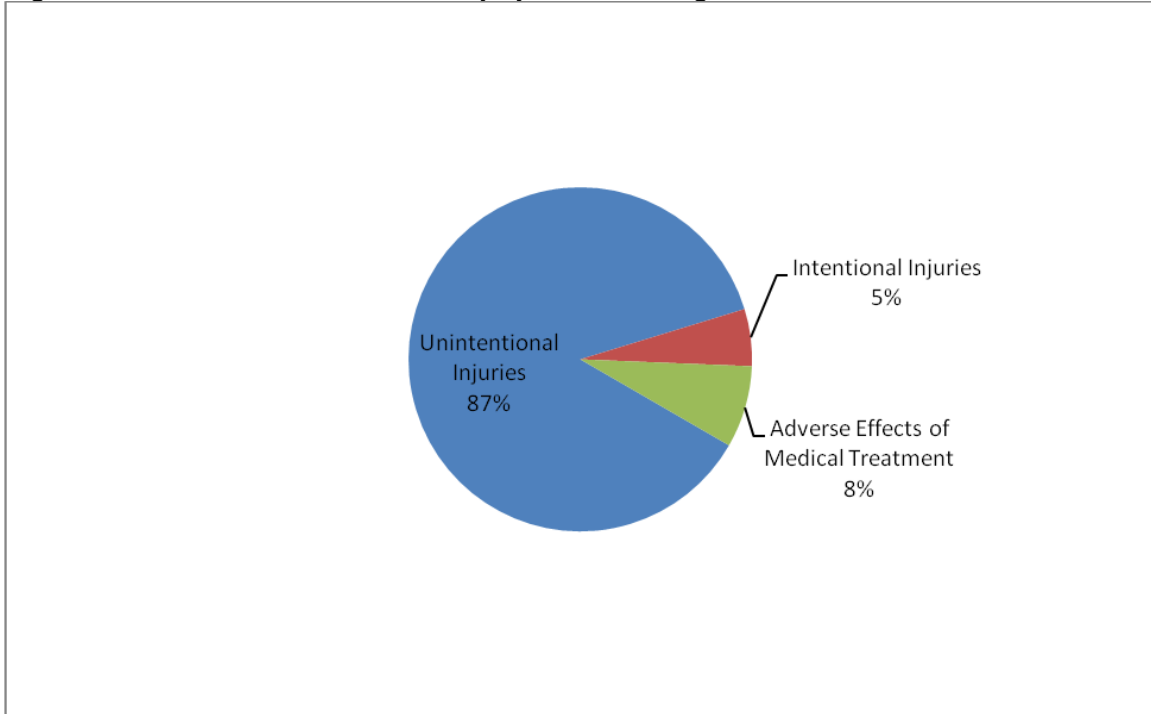

Figure 6. Percent Distribution of ED Encounters by Major Disease Category: Utah, 2009

Unintentional injuries represented 87% of all encounters due to injury and poisoning, with charges totaling \$527,622,906. Intentional injuries accounted for 5% of injury and poisoning encounters and \$56,409,673 in charges. There were 16,875 encounters in 2009 coded as visits due to adverse effects of medical treatment, or 7% of all injury and poisoning encounters, which resulted in charges totaling \$166,309,907. The average statewide charge per encounter for unintentional injuries, intentional injuries, and adverse effects of medical treatment were \$2,468, \$4,261 and \$8,737, respectively. Please see Figure 7 and Table 4 for additional information.

Section II—Summary of Findings—ED Encounters

Figure 7. ED Encounters Due to Injury or Poisoning: Utah, 2009

Among ED encounters due to unintentional injury, the most frequent causes of injury were falls (33%), striking against or struck accidentally by objects or persons (14%), and traffic-related motor vehicle injuries (12%). The percent distribution of ED encounters due to unintentional injury is shown in Figure 8. Table 4 presents additional information.

Section II—Summary of Findings—ED Encounters

Figure 8. ED Encounters by Cause of Unintentional Injury: Utah 2009

Primary payers. The primary source of payment for ED encounters in 2009 was managed care. Blue Cross/Blue Shield and 'Other commercial care' paid for 19% of encounters. Encounters paid by Medicare, Medicaid, and 'Other government sources' combined to equal 39% of encounters in 2009. Encounters with 'Self-pay' as payment source made up 8%. Please see Figure 9 and Table 2 for additional information.

Section II—Summary of Findings—ED Encounters

Figure 9. Percent Distribution of ED Encounters by Primary Payer: Utah, 2009

Section III—Data

Data Collection

The Utah Emergency Medical Services Systems Act, 26-8a-203, Utah Code Annotated, authorizes the Bureau of Emergency Medical Services and Preparedness (BEMSP) to establish an emergency medical services data system. The data elements are defined by the Utah State Emergency Medical Services Committee (Committee), relating to the treatment and care of patients who use, or have used, the emergency medical services system (26-8a-203(2) and 26-8a-104(5)). In addition, 26-8a-203(3) states the following:

Persons (defined as “any individual, firm, partnership, association, corporation, company, group of individuals acting together for a common purpose, agency or organization of any kind, public or private”) providing emergency medical services, shall provide to the department information for the emergency medical services information system established pursuant to Subsection 26-8a-203(2).

Administrative Rule R426-7-3(l) mandates that all Utah licensed hospitals report information on ED patient encounters. The rule defines the data elements which hospitals are required to submit to EMS under statute and administrative rules specifically for the purpose of constructing a statewide Emergency Department Patient Database (EDPD).

Data Submission

Patient data records are to be submitted to the Bureau as specified in the Submittal Manual. The data elements to be submitted are based on the encounter occurring in a calendar quarter.

System Edits

Data are validated through a process of automated editing and report verification. Each record is subjected to a series of edits for accuracy, consistency, completeness, and conformity with the definitions specified in the submittal manual. Records failing the edit check are returned to the data supplier for correction and/or comment.

Privacy, Confidentiality, and Access

Privacy

The individual's right to privacy refers to a patient's capacity to control identifiable information about him/her that could be disclosed under certain conditions. Ensuring patient privacy is carefully considered in the management of BEMSP data files.

Public disclosure of individual hospital data is to be carefully guarded by use of calculated or aggregated values. Release of a hospital's identifiable data occurs only if: the hospital is allowed time to verify the accuracy of the information, submit corrections with supporting evidence, and submit comments or alternate interpretations to the release, and; BEMSP has corrected any data records found to be in error.

Confidentiality

Care will be taken to ensure that access to the BEMSP raw data files is by authorized personnel only. BEMSP and the UDOH manage all data files in compliance with protective policies and procedures. All personnel having any access to BEMSP data files are required to sign a Confidentiality Pledge, which outlines their responsibilities and notifies them of the possible penalties for breach of the agreement.

Access

It is the policy of BEMSP to support legitimate access to its ED data while protecting the patient and hospital right of privacy. This policy governs the administration of confidential data in the custody of BEMSP. Aggregated values are released in designated BEMSP Resource Documents or User Friendly Reports.

Section IV—Technical Notes and Limitations

Sources of Hospital Variation in Volume and Outcome of ED Encounters

Users of this report should remember that several factors, such as volume of patient encounters, coding inconsistencies, and severity of patient illness can influence comparisons among hospitals. When interpreting the information shown in this report, the reader is advised to keep in mind the following:

Volume - If a hospital released only a few types of certain cases, comparing data with other hospitals would not be especially meaningful because a small number of cases is not sufficient to establish a pattern of treatment. The reader must exercise caution when interpreting measures shown in this report that were based on fewer than five releases.

Coding - Inter-hospital data variations may be a reflection of differences in coding practices and quality of data.

The ED Submittal Manual provides data element definitions and standards to ensure that all hospitals will report similar data. Additionally, each hospital is provided with a 35-day review period to validate the data against its hospital records. Despite the validation process, data quality is still a concern, but it is expected to improve over time as hospitals become accustomed to reporting data for public dissemination. Any comparative analysis or decision-making based on this data should take into account issues of data quality.

Severity of Illness - Patient encounters with EDs for the same treatment and conditions often vary in the severity of illness. Factors such as age, gender, and secondary illnesses account for differences in severity. Treating severely ill patients is the most resource-intensive and expensive for any hospital. For instance, patients who are severely ill may need to be admitted to intensive care units, require high-technology equipment, or need to stay longer in hospitals than less ill patients.

Some hospitals, especially regional referral centers like Primary Children's Medical Center and LDS Hospital, treat more acutely ill patients because of the specialized care available at the facility. The University of Utah Hospital, a regional referral center as well as a major teaching hospital, treats more patients with complex medical conditions than other hospitals. Because of services offered and the condition of patients served, charges for patient care at these hospitals may be higher than at other hospitals.

Rural hospitals often admit a mix of patients who may be chronically ill, uninsured, or elderly. The elderly are often more severely ill because of chronic and multiple health problems than younger patients.

Size - Larger hospitals typically provide a more extensive array of services that are more sophisticated and resource-intensive than smaller rural hospitals (e.g., specialized intensive care units).

Section IV—Technical Notes and Limitations

Location – When compared to rural hospitals, urban facilities have higher costs and revenues for a variety of reasons. Cost of labor may be among the most important reasons that urban hospitals incur higher costs. Hospitals in urban labor markets must typically pay more to employ nurses, administrators, hospital-based physicians, and nearly all other hospital personnel.

Teaching Status -Teaching hospitals are those that provide medical education, primarily at the graduate level. The most prominent differences between teaching and non-teaching hospitals occur as a result of the contemporaneous provision of teaching and patient care.

The second major difference between teaching and non-teaching facilities is the broader and more complex scope of services offered by teaching hospitals.

Strategies to Improve Comparability

Outlier Cases - Some patients have exceptionally low or high total facility charges. Hospital charges can be affected by just a few unusually expensive (or inexpensive) cases. These high or low values could be a result of coding or data submittal errors, particularly in total charges. Other reasons for exceptionally low charges could be death or transfer to another facility. Exceptionally high charges could be due to a catastrophic condition. Whatever the reason, these values (referred to as “outliers”) distort the averages and were excluded from calculations. The high total facility charge outliers are defined in this and succeeding reports as values above 2.5 standard deviations from the mean. Mean and standard deviations are All Patient Refined Diagnosis Related Group (APR-DRG) specific and are calculated on a statewide basis. The low outliers were defined as non-newborn or non-normal delivery encounters with less than a \$300 charge. The calculations in this report do not, however, exclude low outliers. A preliminary analysis showed that of the encounters meeting this definition, a high proportion are in the DRG “other factors influencing health status,” for which it was difficult to determine whether they were true outliers.

Hospital Peer Groups - Comparing summary outcome measures (length of stay, total charges, readmission rates, and mortality rates) among hospitals has always been controversial because of the difficulty in defining what makes hospitals “comparable.” As discussed previously, summary outcome measures vary among hospitals depending on various factors like location, number of beds, ownership, affiliation, and teaching status. If all these factors were to be considered in defining peer groups, each hospital might end up in a group by itself.

It was determined that this report would contain summary statistics for a hospital’s peer group as well as for the hospital and the state. The next issue was the basis for the grouping, which is discussed below.

Among various factors affecting a hospital's average charges, location and case-mix indicators play important roles in determining the complexity of patient treatment in

Section IV—Technical Notes and Limitations

the hospital. Therefore, the basis for the 2009 hospital grouping is location (urban/rural) and the all-patient case-mix index, except for psychiatric and substance abuse hospitals and non-comparable hospitals.

In order to be comparable with other reports on hospital utilization, the hospitals are assigned to peer groups according to the 1996 Utah Hospital Discharge Database (UHDDDB) all-patient case-mix index (CMI), in which the peer group classification was derived using 1996 hospital discharge data. The 2009 UHDDDB all-patient CMI is shown below.

Hospital Peer Groups and Case-mix Indexes

Peer Group	Hospital	Location U/R	2009
1	Intermountain Medical Center	Urban	1.2396
1	UHC University of Utah Hospital	Urban	1.5848

*CAH = Critical Access Hospitals

Limitations

This report shows the total billed ED charges. Billed charges are used as one indicator of hospital ED performance. Not all patients or insurance plans pay the same amount for similar treatments, supplies, services, and procedures even though they may be billed the same amount. Hospitals offer a variety of contracts, many with discount arrangements based on volume.

This report can be used to compare broad measures of ED utilization for all hospitals, but more detailed data are needed to look at specific performance comparisons among hospitals. This report addresses ED utilization issues but does not directly measure the quality of medical care. This information serves as an important step toward targeting prevention programs and educating Utahns about their health.

The authors eagerly await your comments and constructive criticism to help shape future reports.

Additional ED Data Resources

EDAR-2008 Tables in Electronic Form—The tables included in this report can be made available in electronic form upon request. Patient-level data are also available in electronic form. (See Appendix B)

Future Reports—The EDAR-2009 contains extensive data that can serve as the basis for other consumer-friendly reports. Standard documents will be published and distributed to a wide range of audiences.

Electronic Data—BEMSP supports legitimate access to its emergency department database while protecting the patient and hospital right of privacy.

Public Data Sets (PDS)—These are available with minimal control. Different data files are designed to provide general health care data to a wide spectrum of users.

User Defined Data Set (UDDS)—These are available through the “Request for Data Release” process. Researchers may request, in writing, a research-oriented database for *bona fide* research and statistical purposes. BEMS&P will forward these requests for review and approval to the Utah Department of Health Institutional Review Board.

Special Data Requests—These will be reviewed jointly by OHCS and BEMSP.

Section V— Appendices

Appendix A: Table Description

There are 25 tables contained in the report, the descriptions for which are included below. The groupings for the tables are derived from the hospital geographic location, patient demographic background, or principal diagnosis coded by the hospital in the patient record. Each patient's ED billing record contains patient demographics, clinical coding classifications based on the International Classification of Diseases, 9th Revision Clinical Modification (ICD-9-CM), payer, and utilization data for each visit. Categories shown in this report were based on ICD-9-CM coding ranges defined in the National Hospital Ambulatory Medical Care Survey: 2006 Emergency Department Summary developed by the National Center for Health Statistics.

The tables present the distribution, composition, and outcome measures of all ED encounters, ED outpatient visits, and ED inpatient admissions by selected characteristics. The information is presented by hospital and arranged in sequence according to peer groups. Where appropriate, comparative statistics are shown between the hospital peer group and the entire state totals.

Table 1 Presents the state level volume of ED encounters, outpatients and inpatients with reported total ED charges by hospital and geographic region.

Table 2 Presents the state level ED encounter profile: gender, age, type of admission, discharge status, and primary payer.

Table 3 Presents the state level volume of ED encounters, average and total ED charges by major disease category and ICD-9-CM code range.

Table 4 Presents the state level ED encounters, average and total ED charges by the categories of intent and mechanism of injury or poisoning.

Table 5 Presents the state level ED encounters, average and total ED charges by principal diagnosis group and ICD-9-CM codes for selected categories.

Table 6 Presents the individual hospital level ED encounter profile: gender, age, type of admission, discharge status, and primary payer.

Table 7 Presents the individual hospital level volume of ED encounters and total ED charges by major disease category and ICD-9-CM code range.

Table 8 Presents the individual hospital level volume of ED encounters, average and total ED charges, by intent and mechanism of injury categories [(E-codes, or external causes of injury codes) as listed in the ICD-9-CM and type of

Section V —Appendix A: Table Description

injury categories (ICD-9-CM code range 800-989)], grouped to highlight the interaction between intent of the injury and the mechanism that produced the injury.

Table 9 Presents the individual hospital level ED encounters and average ED charges by principal diagnosis grouping and ICD-9-CM codes for selected categories.

Table 10 Presents the state level ED outpatient profile: gender, age, type of admission, discharge status, and primary payer.

Table 11 Presents the state level volume of ED outpatient visits, average and total ED charges by major disease category and ICD-9-CM code range.

Table 12 Presents the state level ED outpatient visits, average and total ED charges by the categories of intent and mechanism of injury or poisoning.

Table 13 Presents the state level ED outpatient visits, average and total ED charges by principal diagnosis group and ICD-9-CM codes for selected categories.

Table 14 Presents the individual hospital level ED outpatient profile: gender, age, type of admission, discharge status, and primary payer.

Table 15 Presents the individual hospital level volume of ED outpatient visits and total ED charges by major disease category and ICD-9-CM code range.

Table 16 Presents the individual hospital level volume of ED outpatient visits, average, and total ED charges by intent and mechanism of injury categories [(E-codes, or external causes of injury codes) as listed in the ICD-9-CM and type of injury categories (ICD-9-CM code range 800-989)], grouped to highlight the interaction between intent of the injury and the mechanism that produced the injury.

Table 17 Presents the individual hospital level ED outpatient visits and average ED charges by principal diagnosis grouping and ICD-9-CM codes for selected categories.

Table 18 Presents the state level ED inpatient profile: gender, age, discharge status, primary payer, and local health district.

Table 19 Presents the state level volume of ED inpatient admissions, average and total ED charges by major disease category and ICD-9-CM code range.

Table 20 Presents the state level ED inpatient volume, average and total ED charges by the general categories of intent and mechanism of injury or poisoning.

Table 21 Presents the state level ED inpatient volume, average and total ED charges by principal diagnosis group and ICD-9-CM codes for selected categories.

Table 22 Presents the individual hospital level ED inpatient profile: gender, age, type of admission, discharge status, and primary payer.

Section V —Appendix A: Table Description

Table 23 Presents the individual hospital level volume of ED inpatient admissions and total ED charges by major disease category and ICD-9-CM code range.

Table 24 Presents the individual hospital level volume of ED inpatient admissions, average, and total ED charges by intent and mechanism of injury categories [(E-codes or external causes of injury codes) as listed in the ICD-9-CM and type of injury categories (ICD-9-CM code range 800-989)], grouped to highlight the interaction between intent of the injury and the mechanism that produced the injury.

Table 25 Presents the individual hospital level ED inpatient volume and average ED charges by principal diagnosis grouping and ICD-9-CM codes for selected categories.

Description of Table Entries

Using health care data to affect decision-making requires a commitment on the part of users to understand the complex nature of health care. Decision-making is not simple and should not be based on a single indicator. The following will assist users in interpreting the data contained in this report.

Encounters/Visits - Number of ED encounters that occurred from January 1, 2009 to December 31, 2009. These include patients with out-of-state residencies.

Total Charges - Sum of all ED facility charges included in the billing form, excluding professional fees. *Total charges are different from cost of treatment or payment received by the hospital.*

Average Charges - Sum of total charges divided by number of releases. In the calculation of average charges, outliers that were above 2.5 standard deviations were excluded from the total charges. The arithmetic mean or average lends itself to further mathematical manipulation (i.e., by multiplying it with a projected number of releases to predict future resource use). Thus, it was chosen over other measures of central tendency, such as the median or mode, neither of which has this statistical property.

Major Disease Categories (MDC) - Mutually exclusive principal diagnosis categories. The diagnoses in each MDC correspond to a single organ system or etiology and, in general, are associated with a particular medical specialty.

Age - Derived from date of birth and date of encounter.

Appendix B: Electronic Resource Documents

Public Data Sets (PDS) are available with minimal control. Different data files are designed to provide general health care data to a wide spectrum of users. Although the data are at the patient level, considerable care has been taken to ensure that no individual patient could be identified from the data. The data elements included in the public use data files are:

1	Provider identifier (Hospital)	21	Admission hour
2	Patient's age (in 5-yr. group)	22	Total charge
3	Patient's gender	23	ED charge
4	Source of admission	24	Primary payer category
5	Total hours stay	25	Secondary payer category
6	Patient's release status	26	Tertiary payer category
7	Patient's postal ZIP code	27	Patient's relationship to insured
8	Patient's residential county	28	Charge outlier
9	Patient's migrant status	29	Length of stay outlier
10	Patient's marital status	30	Release quarter
11	Patient's race & ethnicity	31	Record identifier
12	Principal diagnosis	32	Secondary diagnosis code 5
13	Secondary diagnosis code 1	33	Secondary diagnosis code 6
14	Secondary diagnosis code 2	34	Secondary diagnosis code 7
15	Secondary diagnosis code 3	35	Secondary diagnosis code 8

To get complete descriptions of data elements included in the public user data files, point your browser to www.health.utah.gov/ems/. You can also request a copy of the description of PDS data elements by writing or sending an email to BEMSP. Contact information is available on the next page.

Section V—Appendix B: Electronic Resource Documents

User Defined Data Set (UDDS) is available through the “Request for Data Release” process. BEMSP supports legitimate access to its ED database while protecting the patient and hospital right of privacy. To ensure patient privacy, all requests for data release not in aggregated form shall be submitted in letter form specifically stating the purposes for which the data release is requested. Researchers may request, in writing, a research-oriented database for *bona fide* research and statistical purposes. BEMSP will forward these requests for review and approval to the Utah Department of Health Institutional Review Board.

Please send data requests to:
