

# Diarrhea in the Pool

Someone just had a diarrheal accident in this pool.  
You can't see it so it's not a problem, right?  
The chlorine will quickly kill the germs, right?

**NOT EXACTLY!!!**

## The Truth!

- 1-Swimming with diarrhea puts others at risk for getting sick.
- 2-Just one diarrheal accident can contaminate an entire pool.
- 3-Chlorine doesn't kill germs right away. Germs such as crypto can live for days in a pool.
- 4-Don't swim if you have diarrhea. If a diarrheal accident occurs in the pool, report it immediately.
- 5-For more information on recreational water illnesses such as crypto, contact the Local Health Department in your area or call 801-538-6191.
