

Regional Vaccination Coverage Comparison

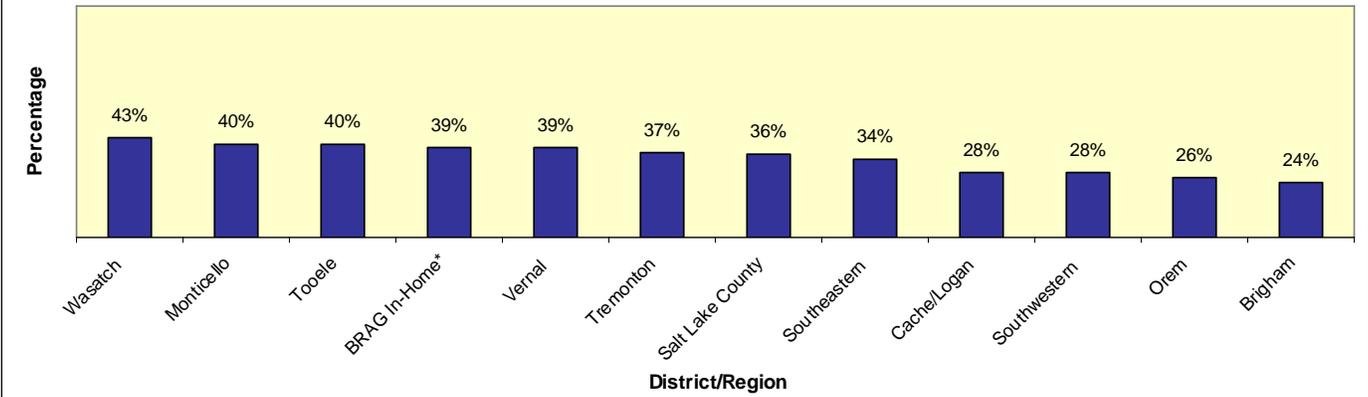

*BRAG In-Home signifies the in-home care respondents served by the Bear River Association of Governments.

Meals-on-Wheels recipients who have ever received a zoster vaccination

Meals-on-Wheels recipients who would like to receive a pneumonia or zoster vaccination

*BRAG In-Home signifies the in-home care respondents served by the Bear River Association of Governments.

Influenza Vaccine Coverage Comparison

Year	U.S. BRFSS ¹ for Flu	Utah BRFSS ¹ for Flu	Utah LTC Rate ² for Flu	Utah Meals-on-Wheels Rate for Flu
2007	72.0%	76.2%	71.6%	82.3% ³
2008	71.1%	73.3%	74.2%	80.0% ³

¹ Behavioral Risk Factor Surveillance Survey rate: the percentage of surveyed non-institutionalized persons aged 65 years and older who have received vaccination.

² Long Term Care Facility rate: the percentage of residents/occupants of nursing homes, assisted living facilities, small care facilities and hospital swing beds who have received vaccination.

³ The Meals-on-Wheels survey used the term 'flu season' rather than a specific calendar year in its questions. Consequently, the survey theoretically spans the entire 2007/2008 flu season and up until the end of February of the 2008/2009 season, when the survey was completed. Because most high risk individuals are vaccinated early each flu season, the survey results are compared to the calendar year in which most vaccinations would have occurred.

Pneumococcal Polysaccharide Vaccine (PPV) Coverage Comparison

Year	U.S. BRFSS ¹ for PPV	Utah BRFSS ¹ for PPV	Utah LTC Rate ² for PPV	Utah Meals-on-Wheels Rate for PPV
2008	66.9%	69.2%	46.6%	72.0%³
