Source: 2005 Utah Health Status Survey

Figure 1.2 Percentage Distribution of Persons With No Health Insurance Coverage by Sex, Utah, 2005

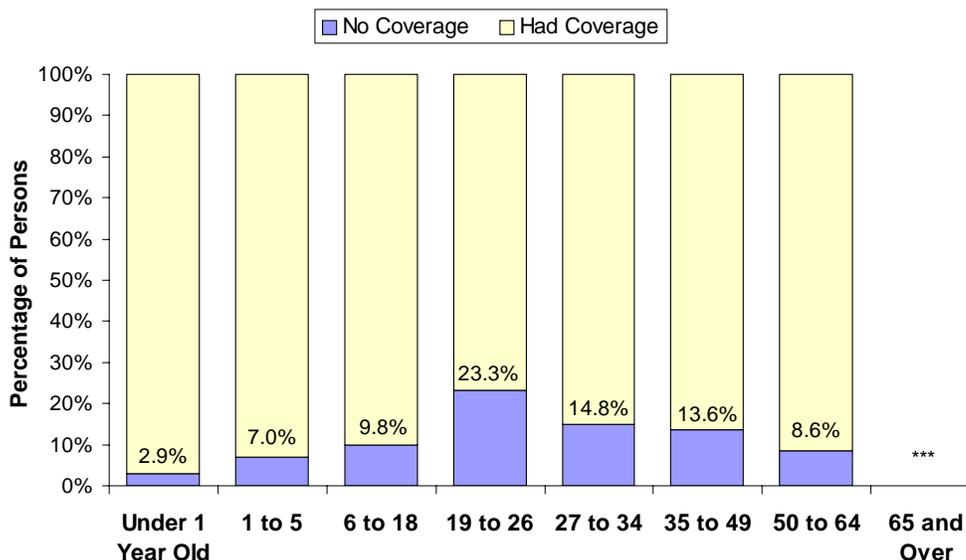

Source: 2005 Utah Health Status Survey

- The percentage of Utahns who did not have any kind of insurance increased from 10.2% in 2004 to 11.6% in 2005. However, this increase was not statistically significant.
- Most Utahns, regardless of sex, had some sort of health insurance coverage.

Figure 1.4 Percentage Distribution of Persons With No Health Insurance Coverage by Age, Utah, 2005

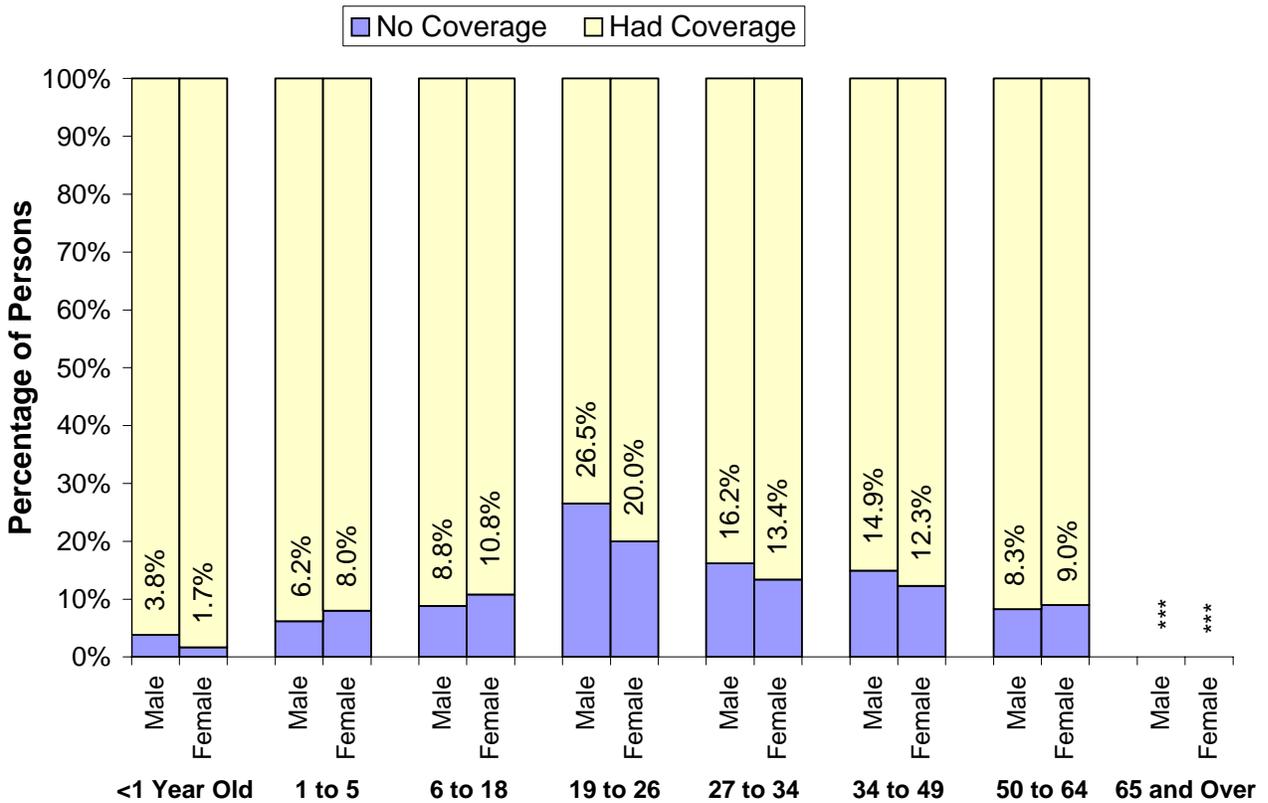

Source: 2005 Utah Health Status Survey
 *** Not enough data cases to provide a precise estimate

- Among those age groups with enough data to report, infants under 1 year (2.9%) were the least likely to lack health insurance. This percentage decreased since 2004 from 3.2%.
- Persons aged 19 to 26 were the most likely to be uninsured (23.3%). This age group also accounts for 28.5% of all uninsured Utahns.

A Profile of Utahns Without Coverage

Figure 1.5 Health Insurance Coverage by Age and Sex, Utah, 2005

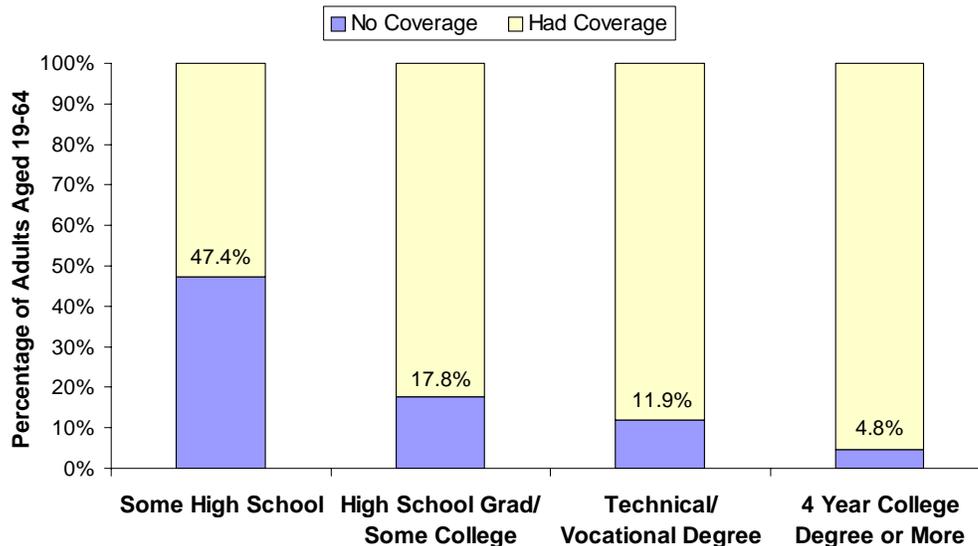

Source: 2005 Utah Health Status Survey
 *** Not enough data cases to provide a precise estimate

- Males aged 19 to 26 were more likely to be uninsured (26.5%) than any other age and sex group. This increased from 18.4% in 2004.
- Among those age groups with enough data to report, compared to 2004, the following age groups experienced a decline in the percentage of Utahns reporting no health insurance: under 1 year old, 1 to 5 years, and 27 to 34 years.
- Compared to 2004, the following age groups experienced an increase in the percentage of Utahns reporting no health insurance: 6 to 18 years, 19 to 26 years, 35 to 49 years, and 50 to 64 years.

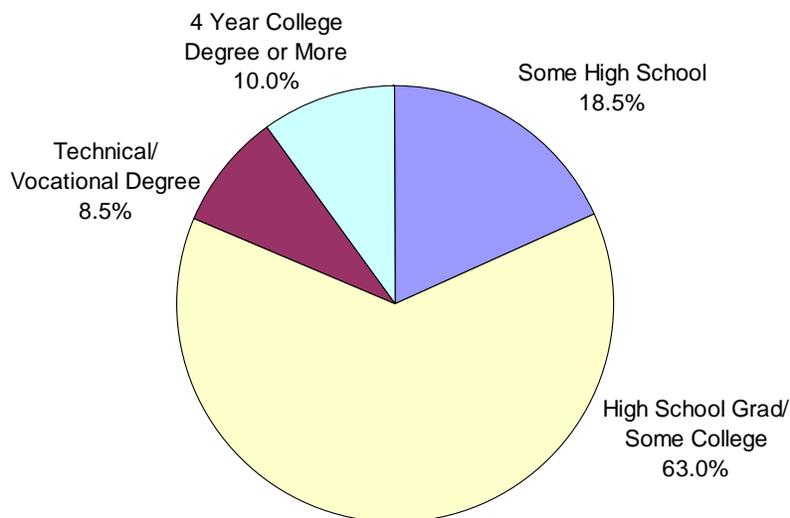

Figure 1.6 Health Insurance Coverage by Education Level, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

Figure 1.7 Percentage Distribution of Persons With No Health Insurance Coverage by Education Level, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

- Utah adults who had not completed high school were significantly more likely to be without health insurance.
- 81.5% of those who were uninsured had at least a high school diploma. However, this percentage has gone down since 2004 (83.2%) and 2003 (91.5%).
- Although Hispanic persons make up only 10.9% of the population, they accounted for more than one-third of those without insurance (34.8%).

1 Population estimates of sex and age groups based on 2005 baseline projections, and Hispanic or Latino ethnicity based on 2004 baseline projections, Governor's Office of Planning and Budget, REMI model system; all others based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

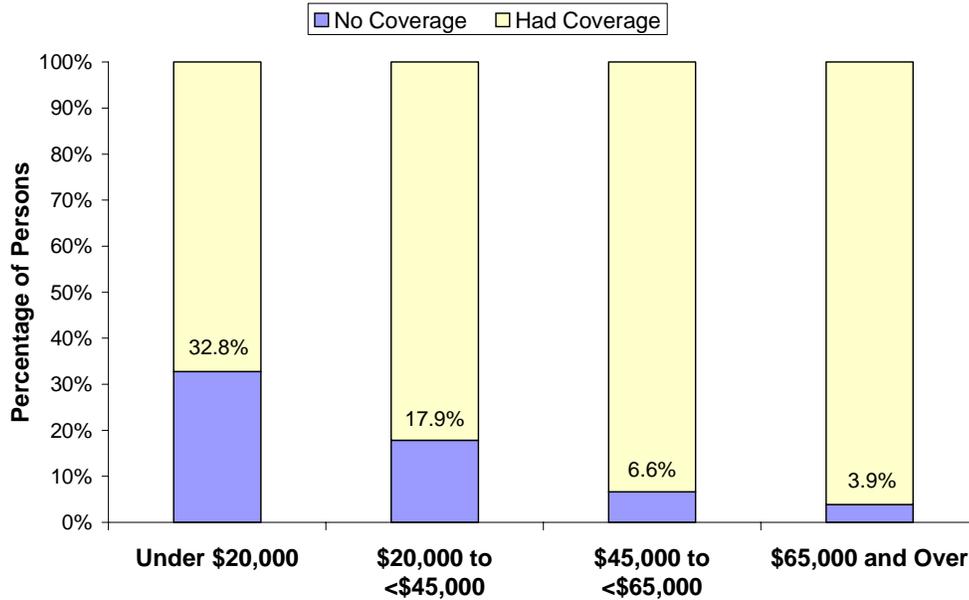

*** Insufficient sample size for calculation of population estimates.

- Persons living in households with incomes below 100% of poverty were significantly more likely (36.4%) than others to lack health insurance.
- Among uninsured adults aged 19 to 64 years, 70.1% reported working either full or part time.

Figure 2.2 Health Insurance Coverage by Annual Household Income and Sex, Utah, 2005

Utah Health Status Survey

- Persons in households with annual incomes under \$20,000 were substantially more likely to lack health insurance coverage than persons in households with higher incomes (32.8%). This increased from 24.4% in 2004.
- As annual household income increased, the number of those reporting no insurance coverage decreased. This was significant across all levels of income.

*** Insufficient sample size for calculation of population estimates.

- When looking at household income and age groups, Utahns aged 35 to 49 years with household incomes under \$20,000 were the most likely to be uninsured, with 57.3% of them reporting no insurance coverage. This percentage increased from 36.0% in 2004.
- With the exception of females living in households with annual incomes of \$45,000 to less than \$65,000, the percentage of Utahns lacking health insurance coverage in all income and sex subgroups increased from 2004 to 2005.

Total, All Female Utahns	100.0%	2,528,900	11.6%	10.1%	13.2%	292,800	100.0%

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

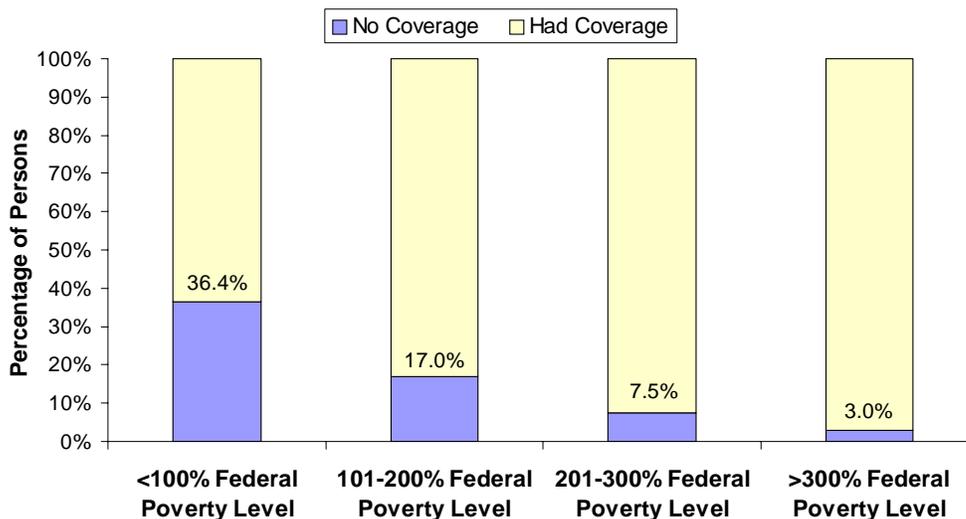

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

*** Insufficient sample size for calculation of population estimates.

- Those aged 35 to 49 years who were living in households with annual incomes under \$20,000 had the highest rates of being uninsured (males: 65.5%, females: 49.4%).

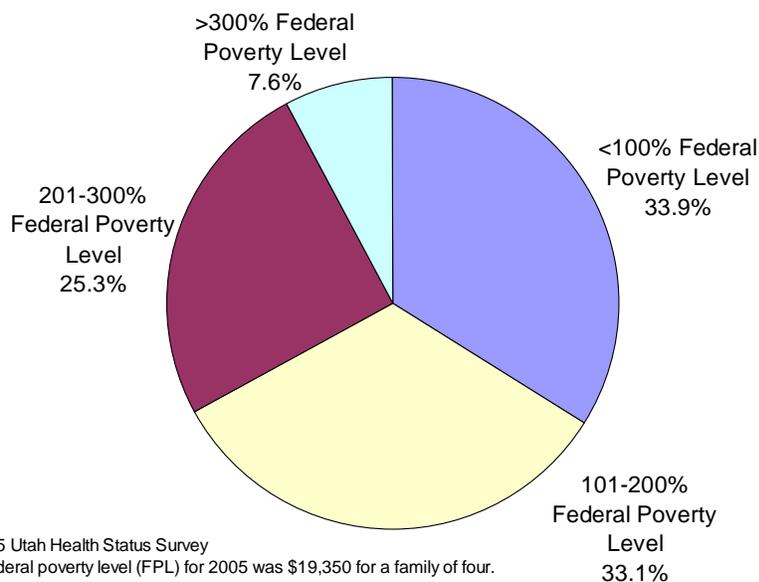

Figure 4.1 Health Insurance Coverage by Poverty Status, Utah, 2005

Source: 2005 Utah Health Status Survey
 Note: The federal poverty level (FPL) for 2005 was \$19,350 for a family of four.

Figure 4.2 Percentage Distribution of Persons With No Health Insurance Coverage by Poverty Status, Utah, 2005

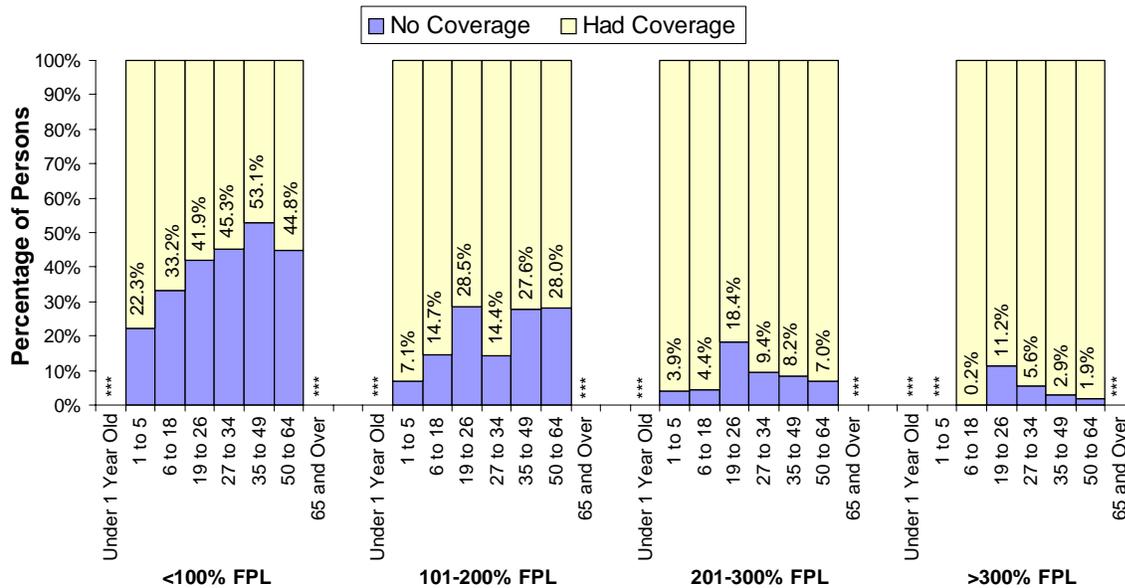

Source: 2005 Utah Health Status Survey
 Note: The federal poverty level (FPL) for 2005 was \$19,350 for a family of four.

- Insurance coverage was more common in more affluent households. Those living in households with incomes below 100% of poverty had the highest uninsured rate (36.4%).

Figure 4.3 Health Insurance Coverage by Poverty Status and Age, Utah, 2005

Source: 2005 Utah Health Status Survey

*** Not enough data cases to provide a precise estimate

Note: The federal poverty level (FPL) for 2005 was \$19,350 for a family of four.

- With the exception of those living in households with incomes above 300% of poverty, Utahns experienced an increase in the uninsured rate between 2004 and 2005.
- The proportion of persons without health insurance was highest for 35- to 49-year-olds living at or below 100% of poverty (53.1%).
- Among those age groups with enough data to report, the proportion of persons with no health insurance coverage was lowest among two groups: those aged 50 to 64 years living above 300% of poverty (1.9%) and those aged 6 to 18 years living above 300% of poverty (0.2%).
- Regardless of poverty level, males were slightly more likely than females to report not having any insurance coverage.

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

*** Insufficient sample size for calculation of population estimates.

- The highest rates for Utahns reporting the lack of health insurance in 2005 occurred in households with incomes at or below 100% of poverty, with 59.6% of males aged 50 to 64 years and 46.6% of females aged 35 to 49 years reporting no insurance coverage.
- Between 2004 and 2005, the greatest increases in the percentage of Utahns lacking health insurance by poverty status and age group by sex occurred at 201–300% of poverty for males aged 19 to 26 years, and females aged 50 to 64 years.

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

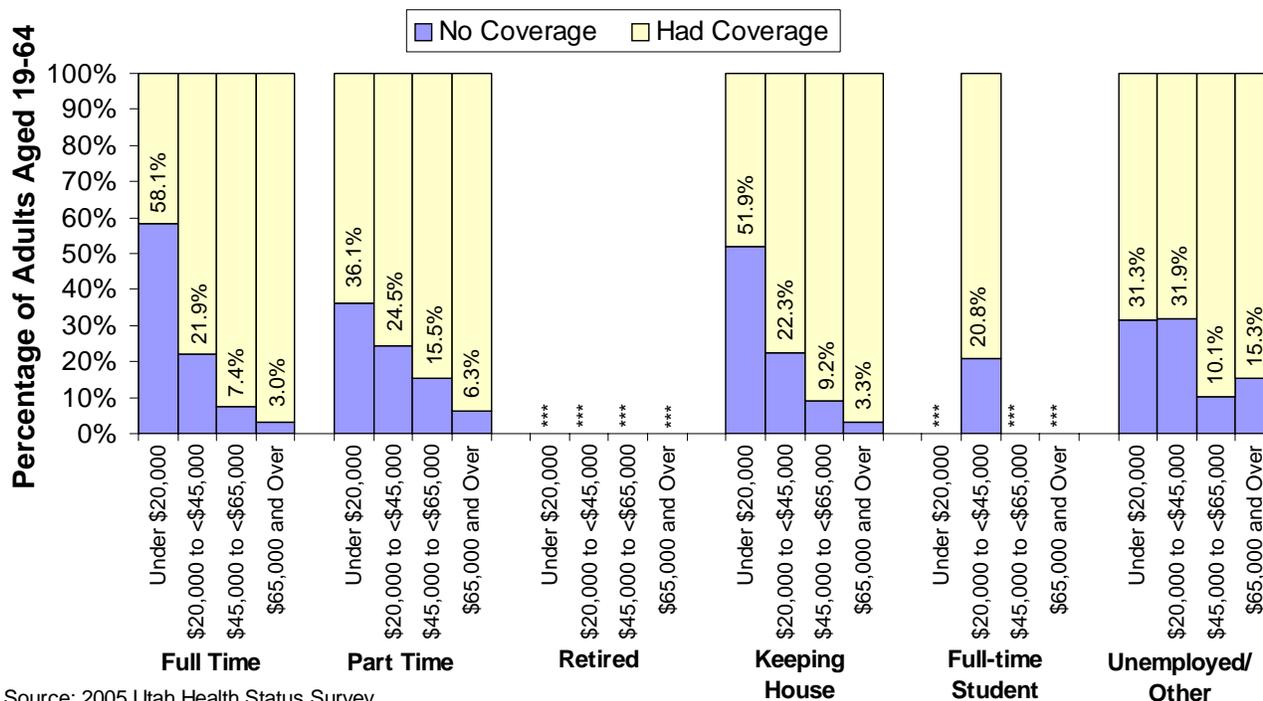

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

*** Insufficient sample size for calculation of population estimates.

- Utahns aged 19 to 64 years who were unemployed or unable to work were the most likely to report lacking health insurance (26.2% uninsured). Unemployed persons aged 19 to 26 years were the most likely of any employment/age group to be uninsured (32.2%).
- Overall, the percentage of adults in Utah aged 19 to 64 without health insurance has increased over the past few years from 11.5% in 2003 to 12.5% in 2004 and 14.9% in 2005.
- Between 2004 and 2005, the percentage of Utah adults with no insurance coverage by employment status increased for the following groups: full time, part time, and retired. The percentage of adults with no insurance decreased for the following groups: keeping house, full-time student, and unemployed other.

Figure 7.1 Health Insurance Coverage by Employment Status and Income, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey
 *** Not enough data cases to provide a precise estimate

- Utah adults (aged 19 to 64) who worked full time and lived in households with annual incomes under \$20,000 were significantly more likely than other full-time workers to be without insurance.
- This same pattern can be seen for those adults who were employed part time or keeping house.
- The proportion of adults working part time and who lived in households with incomes between \$45,000 and \$65,000 who lacked insurance more than doubled between 2004 and 2005 (6.8% and 15.5% respectively).

- Adults working full time and living in households with incomes at or below 100% of poverty were the most likely to be uninsured (56.8%).
- Regardless of employment status, adults living in households with incomes at or below 100% of poverty had higher rates of being uninsured.

Figure 9.1 Health Insurance Coverage by Self-employment Status and Age, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

- Men were slightly more likely than women to be uninsured regardless of self-employment status.
- Among adult Utahns who were employed, those who were self-employed were more likely than those who were not self-employed to lack health insurance regardless of age.
- 61.4% of self-employed adult Utahns with annual household incomes under \$20,000 were uninsured.

5 Type of Work categories are based on the North American Industry Classification System (NAICS) as defined by the U.S. Department of Labor, Bureau of Labor Statistics. NAICS uses a six digit hierarchical coding system to classify all economic activity into twenty industry sectors. Please go to <http://www.bls.gov/bls/naics.htm> for more information.

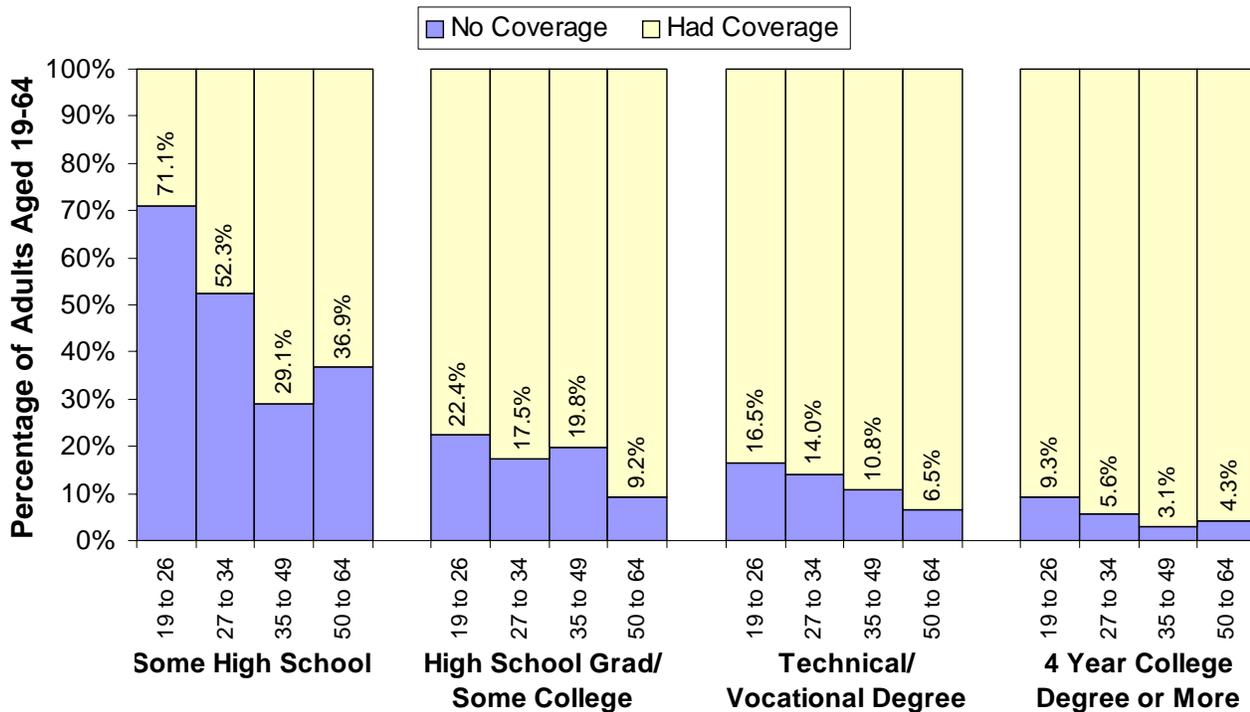

Note: Please see Appendix B for a more detailed description of Type of Work categories.

*** Insufficient sample size for calculation of population estimates.

- Among employed Utah adults (aged 19 to 64), those who were working for employers with 50 or fewer employees were more than three times as likely to be uninsured than those working for larger employers (51 or more employees).
- Uninsured adults working for small employers (50 employees or fewer) made up 69.8% of all uninsured employed adults.
- Among industry groups with enough data to report, Utahns working in hospitality/hotels/restaurants/bars had the highest rates of being uninsured (36.2%).

Figure 11.1 Health Insurance Coverage by Education Level and Age, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

- There was a negative association between education level and the lack of health insurance. As education level increased, the likelihood of lacking health insurance decreased.
- At 71.1%, Utahns aged 19 to 26 who had not completed high school reported the highest rate of lacking health insurance.
- Although Utahns who did not complete high school had the highest percentage who were uninsured (47.4%), the majority (81.5%) of uninsured adults had at least a high school diploma or GED.

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

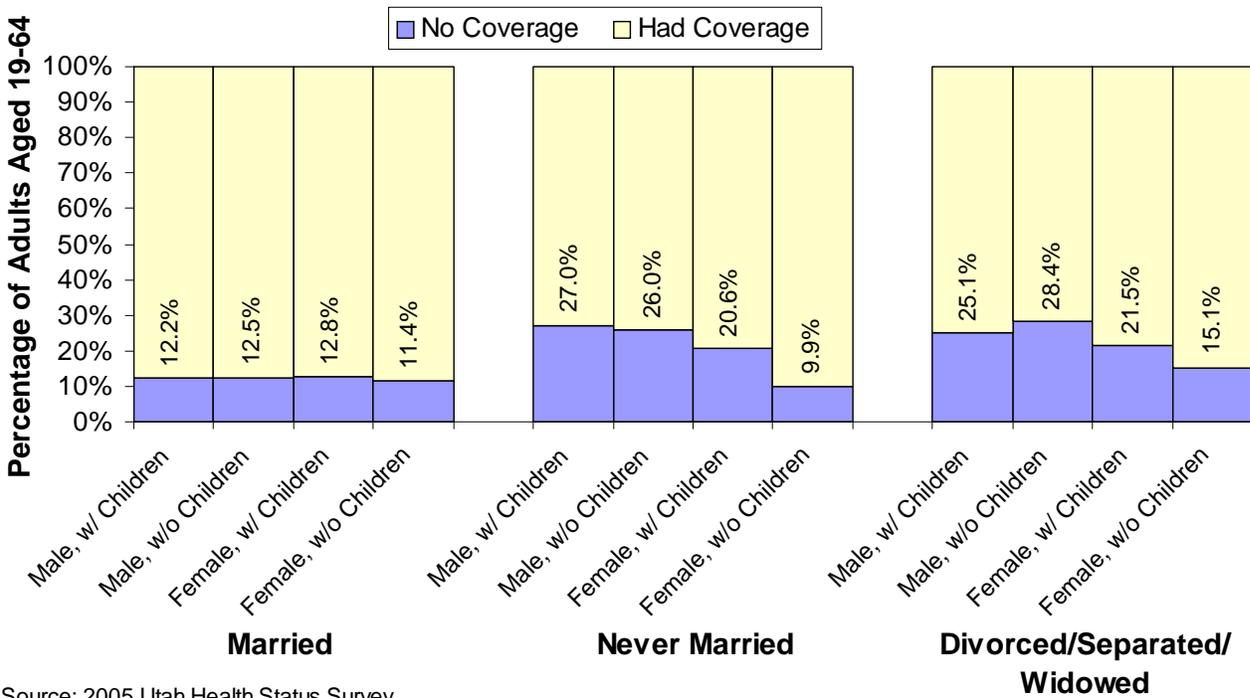

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

- The highest percentage of adults (19 to 64 years) who lacked health insurance by education by poverty status was 61.2% for Utahns who lived in households with incomes at or below 100% of poverty and had not completed a high school education. However, higher rates of being uninsured were reported for Utahns living at or below 100% of poverty regardless of education level.

Figure 12.1 Health Insurance Coverage by Marital Status and Sex and Presence of Children in Household, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

- Married adults were less likely to lack health insurance coverage than either never married adults or divorced/separated/widowed adults (aged 19 to 64). However, as a percentage of all adults who lacked health insurance by marital status, married people made up 60.1%.
- The highest percentage reporting no health insurance coverage by marital status by age was reported by 19- to 26-year-olds who were divorced, separated, or widowed (40.3%).
- Among households with children, adults who were married were the least likely to report lacking health insurance.
- Males who were divorced/separated/widowed and did not have children were more likely than other males to report lacking coverage (28.4%).
- Females who were divorced/separated/widowed and had children were more likely than other females to lack health insurance, with 21.5% lacking coverage.

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

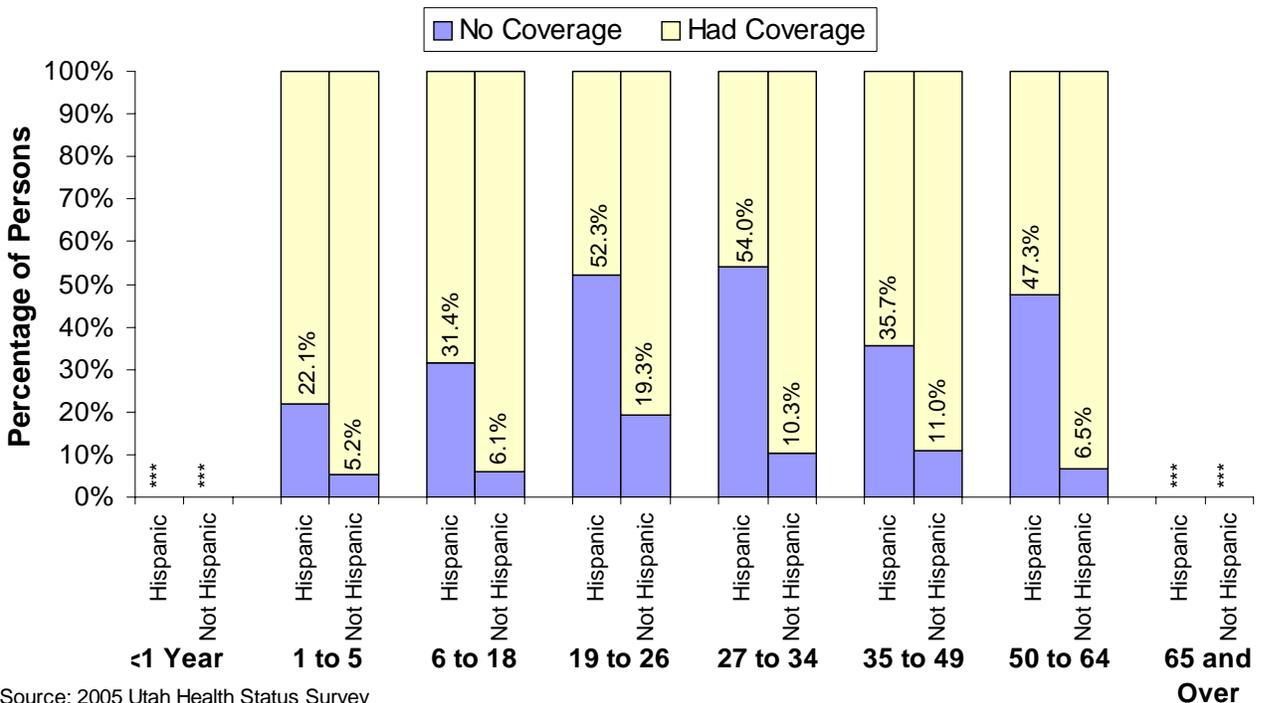

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

Figure 13.1 Health Insurance Coverage by Hispanic or Latino Ethnicity and Age, Utah, 2005

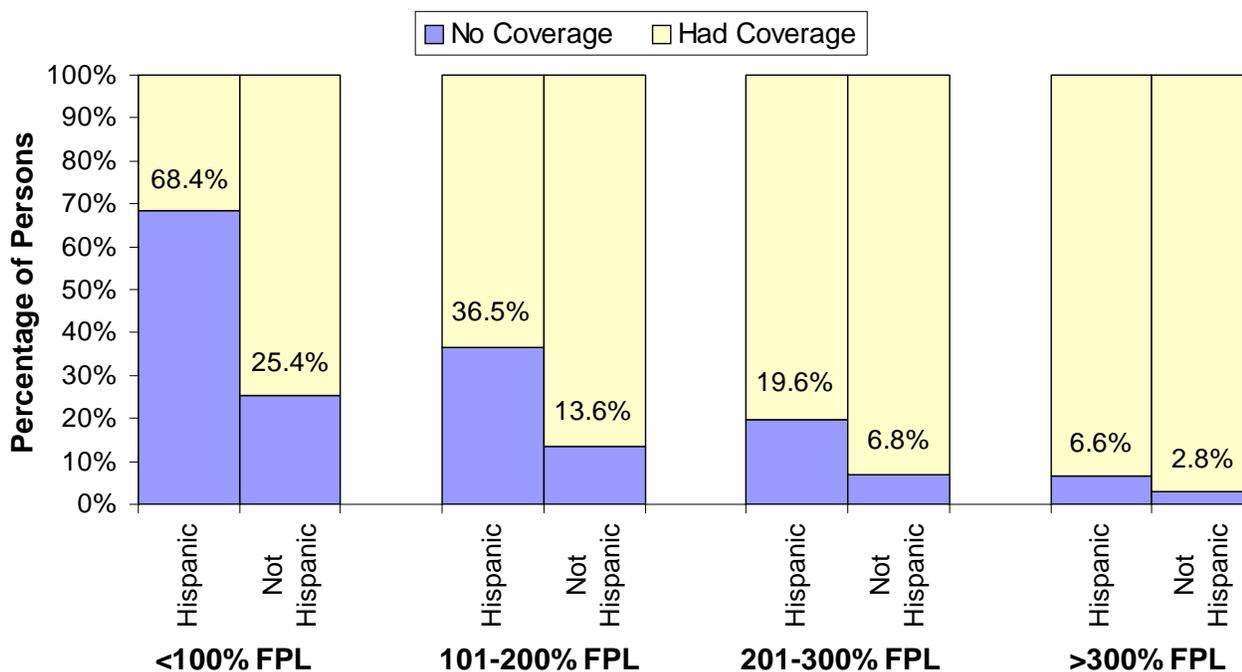

Source: 2005 Utah Health Status Survey

*** Not enough data cases to provide a precise estimate

- Utahns who were of Hispanic or Latino ethnicity were more than four times more likely to lack health insurance coverage than non-Hispanic Utahns (37.4% vs. 8.5%).
- The likelihood of lacking health insurance coverage by Hispanic or Latino ethnicity and age was highest among Hispanic/Latino persons aged 27 to 34 (54.0%). However, the uninsured rate for Hispanic/Latino persons was significantly higher than non-Hispanic persons across all age groups.

Figure 13.2 Health Insurance Coverage by Hispanic or Latino Ethnicity and Poverty Status, Utah, 2005

Source: 2005 Utah Health Status Survey

Note: The federal poverty level (FPL) for 2005 was \$19,350 for a family of four.

- Hispanic persons living in households with incomes at or below 100% of poverty were the most likely to lack health insurance among Hispanic ethnicity/poverty levels (68.4%).
- The percentage of uninsured for those living below 100% of poverty was more than 2.5 times higher for Hispanic persons than for non-Hispanic persons.
- Among those age and sex groups with enough data to report, regardless of age or sex, Hispanic or Latino persons were substantially more likely to be uninsured than non-Hispanic persons.
- Among those age and sex groups with enough data to report, Hispanic Utahns were the most likely to lack health insurance coverage across age groups. Among Hispanic males, those aged 19 to 26 years had the highest rate (60.8%). Among Hispanic females, those aged 27 to 34 were the most likely to be uninsured (49.0%).

Figure 14.1 Health Insurance Coverage by Hispanic or Latino Ethnicity and Employment Status, Utah Adults Aged 19-64, 2005

Source: 2005 Utah Health Status Survey

*** Not enough data cases to provide a precise estimate

- Among employment groups with enough data to report, Hispanic or Latino persons had significantly higher rates of being uninsured.
- Hispanic or Latino adults (aged 19 to 64) who worked full time were nearly five times more likely than their non-Hispanic counterparts to be uninsured.
- More than half (51.2%) of Hispanic or Latino persons who were keeping house lacked health insurance coverage. This is compared to 10.3% of non-Hispanics keeping house.

*** Insufficient sample size for calculation of population estimates.

- Self-employed Hispanic or Latino persons reported lower levels of being uninsured than those who were not self-employed (self-employed: 38.6% vs. not self-employed: 45.3%). In contrast, self-employed non-Hispanic persons had higher levels of being uninsured (self-employed: 20.1% vs. not self-employed: 8.9%).
- Lower levels of education were associated with lower levels of health insurance coverage, regardless of Hispanic or Latino ethnicity. However, this association was stronger for Hispanic than for non-Hispanic persons.

1 Total population estimate based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all other population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

*** Insufficient sample size for calculation of population estimates.

- Utahns living along the Wasatch Front were somewhat more likely to have health insurance coverage than those in more rural areas (11.4% vs. 12.2% uninsured).
- Utahns who did not live along the Wasatch Front and were aged 19 to 26 years reported the highest levels of being uninsured (males: 32.9%; females: 28.2%).

- Among Utah adults (aged 19 to 64 years) who were not self-employed, those who did not live along the Wasatch Front were significantly more likely to lack health insurance coverage.

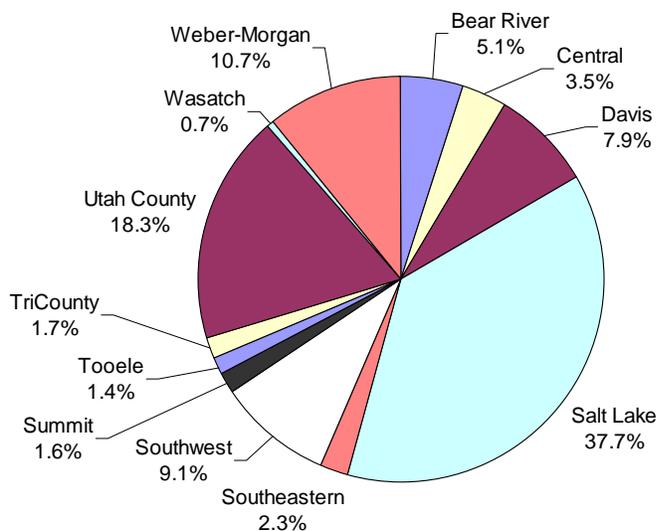

Figure 17.1 Health Insurance Coverage by Local Health District, Crude Rates, Utah, 2005

Source: 2005 Utah Health Status Survey

Figure 17.2 Percentage Distribution of Persons With No Health Insurance Coverage by Local Health District, Crude Rates, Utah, 2005

Source: 2005 Utah Health Status Survey

- Persons living in Southwest Utah health district were the most likely to lack health insurance coverage (14.7%). Persons living in Davis County (8.4%) and Tooele County (8.1%) health districts were the least likely to lack health insurance.
- All local health districts with the exception of Central Utah and Southeastern Utah had higher rates of lacking insurance between 2004 and 2005. The largest increase occurred in Weber-Morgan, where the percentage of people lacking insurance more than doubled.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns do not sum to the total because of missing values on the grouping variables.

- Health insurance coverage is related to age. For instance, nearly all persons aged 65 and over have coverage. In Utah, non-Wasatch Front counties have higher proportions of residents aged 65 or over. Thus, the crude uninsured rate might be improved merely because they have more residents on Medicare.
- If a geographic area has a high age-adjusted uninsured rate, this indicates that other (non-age-related) risk factors are responsible.

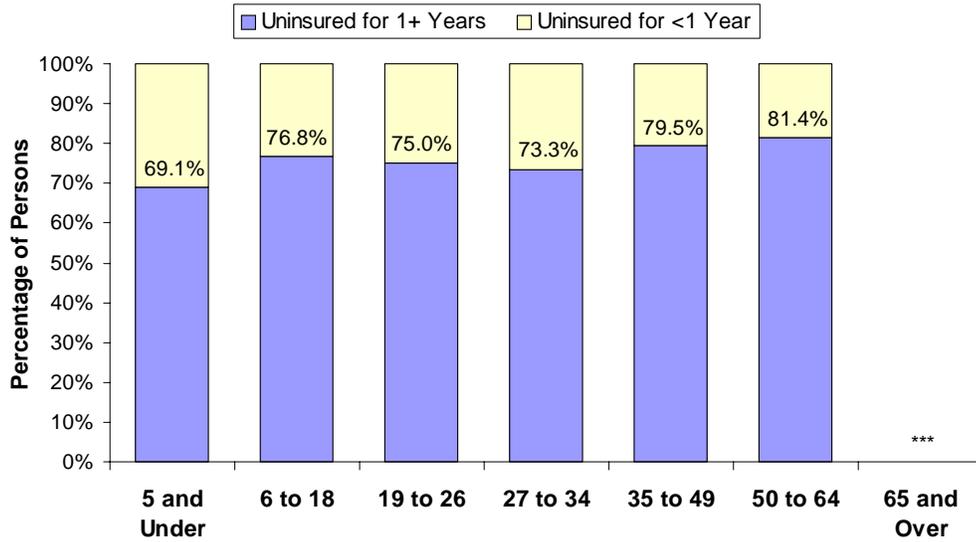

Lack of Coverage in Utah: The Nature of the Problem

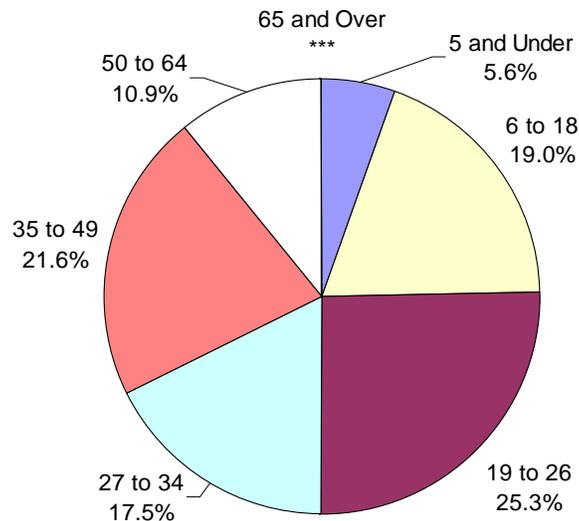

Lack of Coverage in Utah: The Nature of the Problem

1 Population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

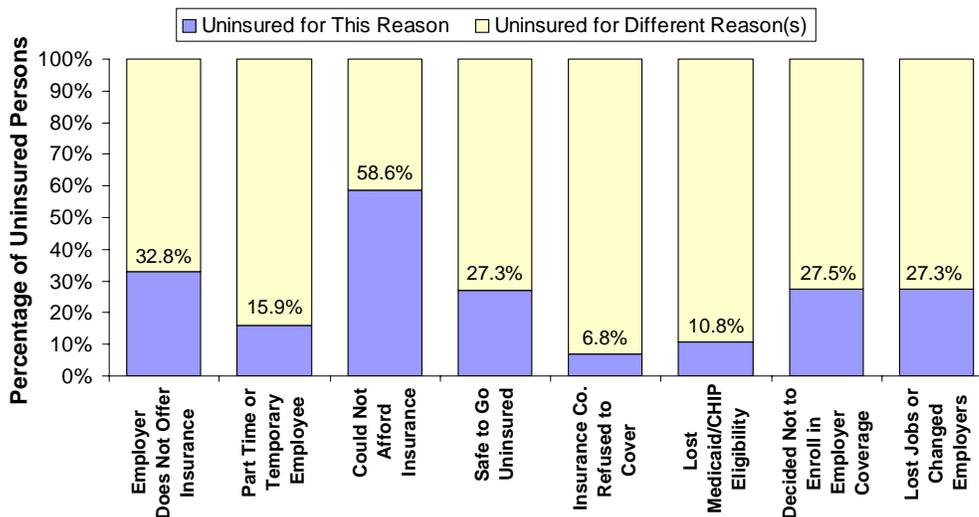

5 These rates have not been age-adjusted.

*** Insufficient sample size for calculation of population estimates.

- Among uninsured Utahns, 76.1% reported having been without health insurance for at least one year. The percentage of uninsured Utahns who have been uninsured for one year or longer has been increasing along with the uninsured rate (2003: 55.1% and 2004: 65.6%).
- Among uninsured Utahns who had been uninsured for one year or longer, all age groups experienced an increase between 2004 and 2005. The highest increase was experienced among children 5 years and under (2004: 39.1% and 2005: 69.1%)
- Tooele County health district had the lowest percentage of uninsured persons reporting they had been uninsured for one year or more (50.3%). Southeastern Utah had the highest percentage (91.1%).
- 87.6% of uninsured Hispanic persons were uninsured for one year or longer.

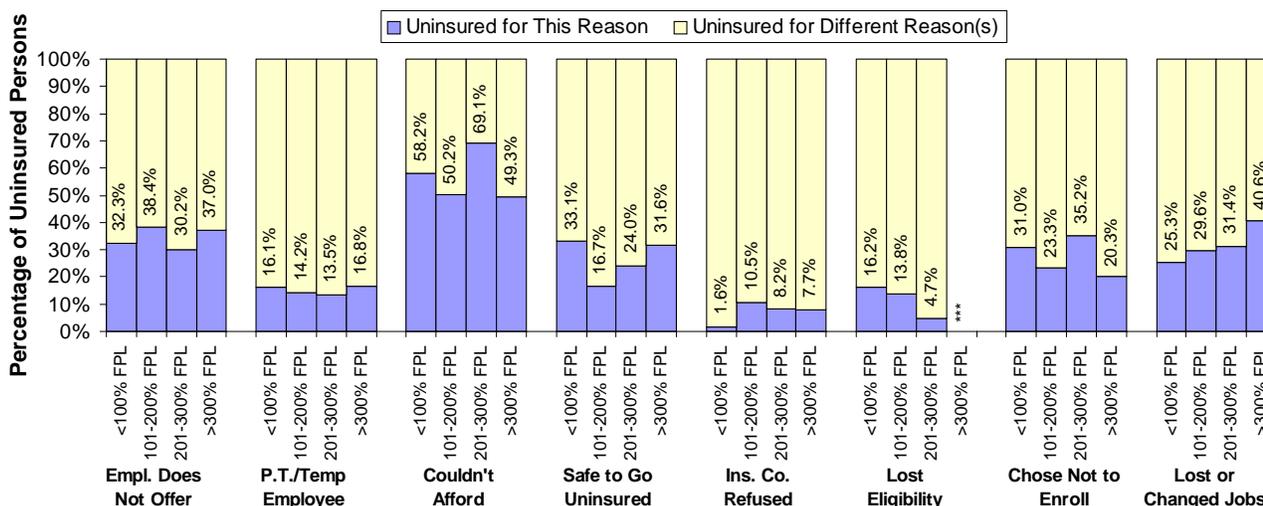

Figure 19-26.1 Reasons for Lack of Coverage, Utahns Without Health Insurance, 2005

Source: 2005 Utah Health Status Survey
 Note: Respondents were allowed to cite more than one reason

Figure 19-26.2 Reasons for Lack of Coverage by Poverty Status, Utahns Without Health Insurance Coverage, 2005

Source: 2005 Utah Health Status Survey
 *** Not enough data cases to provide a precise estimate
 Note: The federal poverty level (FPL) for 2005 was \$19,350 for a family of four.

- The estimates on this page and in tables 19–28 are for uninsured Utahns only. They do not include the insured population.
- The Utah Health Status Survey measures several common reasons for lack of coverage, but certainly not all reasons. Additionally, the reasons reported in this report are not mutually exclusive. Respondents may have reported multiple reasons for lacking health insurance.
- The most common reason cited for not having health insurance was “could not afford insurance” (58.6%).

- 32.8% of uninsured Utahns reported that an “employer does not offer” insurance as a reason for lacking health insurance.
- Uninsured Utahns aged 27 to 34 were the most likely age group to report that an “employer does not offer” health insurance as a reason for lacking insurance (40.7%).
- Southeastern Utah health district had the highest percentage of uninsured persons (50.5%) who reported that an “employer does not offer” insurance as a reason for being uninsured.
- Among uninsured adults (19–64 years) who were working full time, 41.3% reported that an “employer does not offer” as a reason for lacking health insurance.

*** Insufficient sample size for calculation of population estimates.

- 15.9% of uninsured persons reported part-time or temporary employment as a reason for lacking health insurance.
- Uninsured Utahns aged 19 to 26 were more likely than other age groups to report that they were part-time or temporary employees as a reason for lacking insurance (22.7%).
- Bear River health district had the highest percentage of uninsured persons reporting they were part-time or temporary employees as a reason for lacking health insurance (26.5%). Summit County health district had the lowest percentage reporting this reason (2.6%).
- Interestingly, those living in households with incomes above 300% of poverty were the most likely to report part-time or temporary employment as a reason for being uninsured.

1 Population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

5 These rates have not been age-adjusted.

*** Insufficient sample size for calculation of population estimates.

- Uninsured Utahns aged 19 to 26 made up over one-quarter (26.9%) of all uninsured Utahns reporting that they “could not afford” insurance as a reason for being uninsured.
- Southeastern Utah health district uninsured residents were the most likely to report they “could not afford” insurance (77.6%); Summit County health district uninsured residents were the least likely to report they “could not afford” insurance as a reason for not being insured (44.4%).
- Nearly two-thirds (62.9% or 106,100 persons) of uninsured Utahns were in households with incomes under 200% of poverty and “could not afford” insurance.
- Uninsured adults working full time were the mostly likely to report they “could not afford” health insurance (66.5%). This group also made up over one-half (55.4%) of all adults aged 19 to 64 who “could not afford” insurance.

Lack of Coverage in Utah: The Nature of the Problem

- Over one-quarter (27.3%) of uninsured Utahns reported that they were “safe to go uninsured” as a reason for lacking health insurance coverage.
- Among uninsured Utahns in good or excellent health, 30.1% reported they were “safe to go uninsured,” compared to 4.2% of Utahns in fair or poor health.
- Salt Lake Valley health district had the highest percentage of uninsured Utahns reporting they were “safe to go uninsured” (35.2%).

- Overall, the percentage of uninsured Utahns reporting, “the insurance company refused to cover them” decreased from 2004 (10.8%) to 2005 (6.8%).
- Of reportable data, uninsured persons aged 35 to 49 years were more likely than other groups to report “the insurance company refused to cover them” as a reason for lacking health insurance (10.6%).
- Not surprisingly, uninsured Utahns who were in fair or poor health were significantly more likely than those in good or excellent health to report “the insurance company refused to cover them” (12.8% and 5.7% respectively).

1 Population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

5 These rates have not been age-adjusted.

*** Insufficient sample size for calculation of population estimates.

- Overall, 10.8% of the uninsured in 2005 reported losing Medicaid or CHIP eligibility as a reason for lacking health insurance.
- Females were significantly more likely than males to report losing Medicaid or CHIP eligibility (14.5% and 7.6% respectively).
- As a proportion of uninsured Utahns who reported losing Medicaid or CHIP eligibility, 56.2% were aged 18 or under.
- Of the health districts with enough sample size for reporting estimates, persons living in TriCounty health district were the most likely to report losing Medicaid or CHIP eligibility (28.5%).
- For those who reported losing eligibility, additional questions were asked to determine reasons for losing eligibility. 9.4% reported that the children were too old or that the mother was no longer pregnant. (This statistic is not in the table).
- However, the most common reason given for losing Medicaid or CHIP eligibility was an increase in family income (49.6% of those who reported losing eligibility), followed by “did not complete necessary paper work” (14.5%). (This statistic is not in the table).

- Overall, 27.5% of uninsured Utahns reported they “decided not to enroll in employer coverage.”
- More than one-half (53.4%) of respondents who “decided not to enroll in employer coverage” also reported that insurance was too expensive as a reason for lacking health insurance. (This statistic is not in the table).
- 37.4% of respondents who “decided not to enroll in employer coverage” also reported they were healthy and safe not to have insurance as a reason for lacking health insurance. (This statistic is not in the table).
- Uninsured Utahns living in Tooele County health district were the most likely to report they “decided not to enroll in employer coverage” (35.1%).
- Interestingly, uninsured Utahns living in households with incomes between 200% to 300% of poverty were the most likely to report they “decided not enroll in employer coverage” as a reason for lacking insurance (35.2%).
- 75.3% of uninsured adults (19 to 64 years) who “decided not to enroll in employer coverage” were working either full or part time.

*** Insufficient sample size for calculation of population estimates.

- 27.3% of uninsured Utahns said that losing their job or changing employers was a reason they were uninsured.
- Uninsured Utahns aged 50 to 64 years were significantly more likely than others to report losing or changing a job as a reason for lacking health insurance (43.9% vs. 27.3% state rate).
- Tooele County health district had the highest proportion of uninsured Utahns reporting the loss or change of a job as a reason for being uninsured (46.8%).
- As poverty level increased, the likelihood of reporting the loss or change of a job as a reason for lacking health insurance increased.

Lack of Coverage in Utah: The Nature of the Problem

Figure 27.1 Health Status of Uninsured Persons by Age, Utah, 2005

Source: 2005 Utah Health Status Survey

*** Not enough data cases to provide a precise estimate

- In 2005, approximately 40,900 uninsured Utahns were in fair or poor health.

1 Population estimates based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

*** Insufficient sample size for calculation of population estimates.

- As age increased, the percentage of uninsured persons in fair or poor health also increased.
- Persons living in households with incomes between 101% and 200% of poverty were the most likely to report being uninsured and having fair/poor health.

Lack of Coverage in Utah: The Nature of the Problem

Table 28. Percentage of Persons With No Health Insurance Coverage by Presence of Chronic Medical Conditions, Uninsured Utah Residents, 2005

Medical Condition	Survey Estimates of Uninsured Persons by Medical Condition			
	Percentage of Uninsured Persons ¹			Number of Uninsured Persons ²
	95% Confidence Intervals			
	Lower	Upper		
Diabetes	2.0%	1.1%	3.6%	5,700
Asthma	6.8%	5.1%	9.0%	19,900

1 Asymmetric confidence bounds were calculated using the logit transformation.

2 Population estimates based on 2005 UHSS and rounded to the nearest 100 persons.

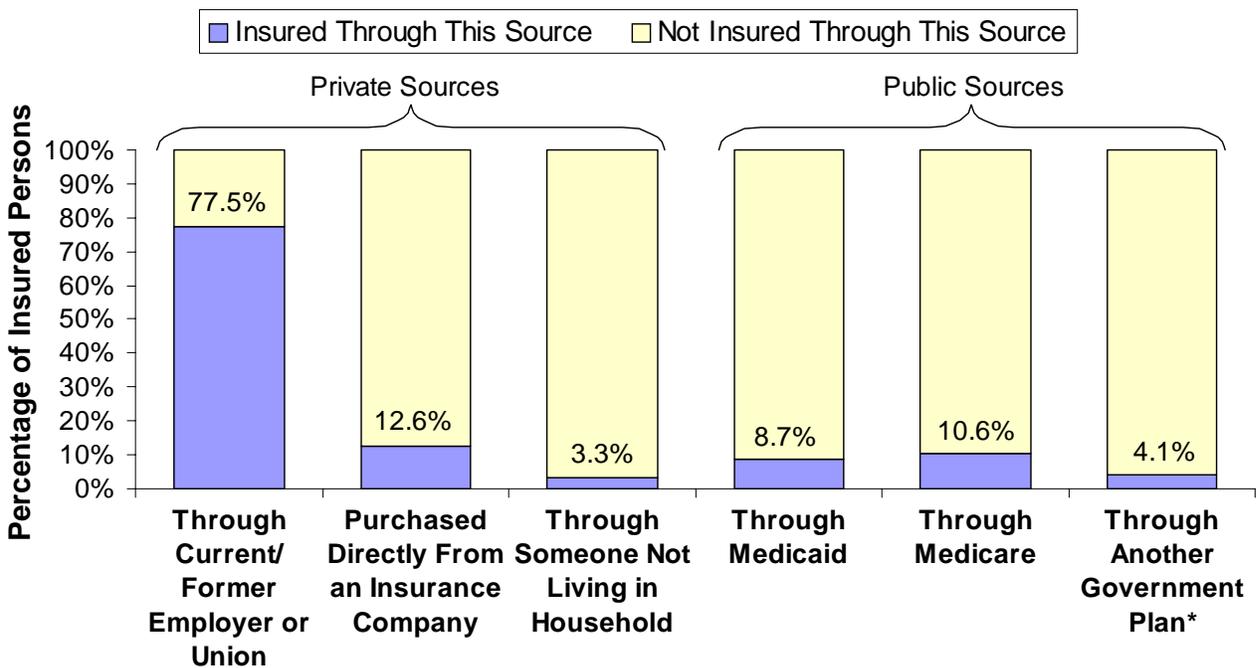

Health Insurance Coverage by Plan Type

Health Insurance Coverage by Plan Type

Figure 29-34.1 Health Insurance Coverage by Source, Utah, 2005

Source: 2005 Utah Health Status Survey

* "Another government plan" includes Military, Tricare, or the V.A.

Note: Bars are not mutually exclusive, both by definition, and because a person may be covered by more than one type of plan.

- The estimates on this page and in tables 29–35 are for insured Utahns only. They do not include the uninsured population.
- Each individual can have more than one source of insurance coverage: groups are not mutually exclusive.
- Most insured persons had insurance through a current or former employer or union (77.5%).
- Among insured children aged 0 to 18 years, 5.7% were covered by the Children’s Health Insurance Program (Table 35).

Figure 35.1 Health Insurance Coverage Through CHIP by Local Health District, Insured Utah Children Aged 0-17, 2005

Source: 2005 Utah Health Status Survey

*** Not enough data cases to provide a precise estimate

- The percentage of children (aged 0 to 18 years) insured by CHIP increased from 4.1% in 2004 to 5.7% in 2005.
- Southwest Utah health district had the highest percentage of children (aged 0 to 18 years) insured through CHIP (15.5%).
- The proportion of insured children insured by CHIP was negatively associated with poverty status. Children in households with incomes at or below 100% of poverty had the highest levels (15.5%) and children in households with incomes above 300% had the lowest (0.3%).
- However, the percentage of children covered by CHIP increased across all levels of poverty from 2004 to 2005.

Problems With Access to Health Care

Problems With Access to Health Care

Figure 36.1 Problems With Access to Health Care, Utah, 2005

Source: 2005 Utah Health Status Survey

* Note: Estimate based on insured Utahns only. All others based on entire Utah population.

- Access to health care was measured in several ways in the Utah Health Status Survey.
- The estimate for “insurance company does not cover service” is only for the insured population. All other estimates on this page are for the entire Utah population.
- The most common problem accessing health care was due to the inability to afford services (12.9%). This was independent of insurance coverage.

Table 36. Percentage of Persons Reporting Problems With Access to Health Care by Type of Access Problem, Utah Residents, 2005

Access Problem	Survey Estimates of Persons by Type of Access Problem			
	Percentage of Persons With Each Type of Access Problem ¹			Number of Persons With Each Type of Access Problem ²
	95% Confidence Intervals			
	Lower	Upper		
Ins Company Does Not Cover Service ³	8.0%	7.1%	9.0%	179,000
Could Not Find Services in the Area	2.9%	2.4%	3.4%	72,700
Could Not Afford the Services	12.9%	11.8%	14.1%	326,700
Could Not Afford Prescription	7.7%	6.9%	8.5%	193,900
Concerned with Residency Status	0.2%	0.1%	0.5%	6,200
Total, All Utahns	100.0%			2,469,200

1 Asymmetric confidence bounds were calculated using the logit transformation.

2 Rounded to the nearest 100 households.

3 Estimate for this row based on insured Utahns only. All others based on entire Utah population.

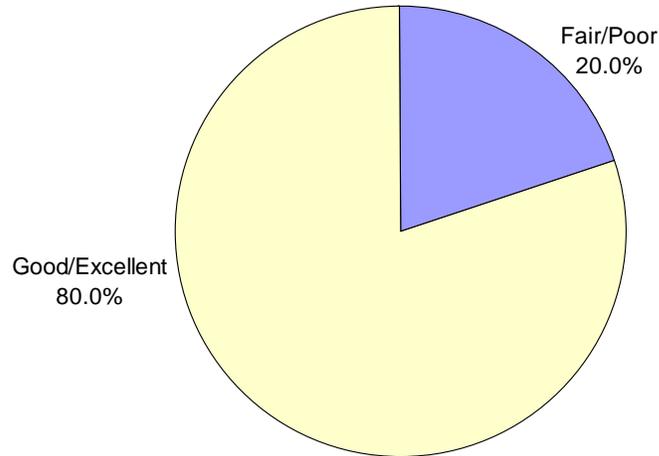

Note: Because individuals could choose more than one reason, figures sum to greater than 100%.

- Approximately 326,700 Utahns reported problems accessing health care because of cost.
- 7.7%, or 193,900 Utahns, reported problems with health care because they could not afford prescription medications.

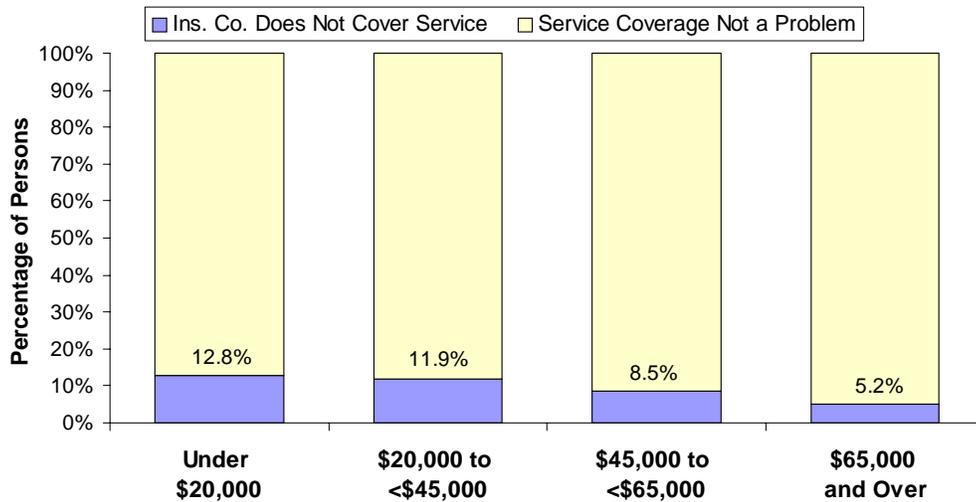

Problems With Access to Health Care

Figure 37.1 Percentage Distribution of Insured Persons Reporting Problems With Access to Health Care Because Insurance Company Does Not Cover Service by Health Status, Insured Utahns, 2005

Source: 2005 Utah Health Status Survey

Figure 37.2 Access Problems Because Insurance Company Does Not Cover Service by Annual Household Income, Insured Utahns, 2005

Source: 2005 Utah Health Status Survey

- Overall, 8.0% of insured Utahns reported that their insurance company refused to cover a service.
- One-fifth of insured Utahns in fair or poor health reported problems with access to health care because their insurance company refused to cover a service.

Figure 38.2 Access Problems Due to Inability to Find Services in Area by Annual Household Income, Utah, 2005

Source: 2005 Utah Health Status Survey

- Utahns living in Southeastern Utah health district were the most likely to report problems due to an inability to find services in their area (15.1%).
- Utahns living in households with annual incomes under \$20,000 were more likely than others to report problems finding services in their area.

Problems With Access to Health Care

Figure 39-40.1 Access Problems Due to Cost by Annual Household Income, Utah, 2005

Source: 2005 Utah Health Status Survey

Figure 39-40.2 Access Problems Due to Insurance Status, Utah, 2005

Source: 2005 Utah Health Status Survey

- The inability to afford services and the inability to afford prescriptions were both negatively associated with household income. As income increased the likelihood of reporting one of these problems decreased.
- Uninsured Utahns were significantly more likely than insured Utahns to report problems affording services or prescriptions.

1 Population estimates of sex, age groups, and local health districts based on 2005 baseline projections, Governor's Office of Planning and Budget, REMI model system; all others based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.

5 These rates have not been age-adjusted.

*** Insufficient sample size for calculation of population estimates.

Table 41. Percentage of Persons Reporting Problems With Access to Health Care Because They Were Concerned About VISA, Citizenship, or Residency Status by Sex, Age Group, Local Health District, Annual Household Income, Health Status, and Health Insurance Coverage, Utah Residents, 2005

Demographic Subgroup	Population Size		Survey Estimates of Persons Reporting Problems With Access to Health Care Because They Were Concerned About VISA, Citizenship, or Residency				
	Percentage Distribution	Number of Persons ¹	Percentage of Insured Persons ²			Number of Persons ^{3,4}	Percentage Distribution by Demographic Subgroup ⁴
			95% Confidence Intervals
